

Daily Flash

Asia

Equity markets in Japan and Mainland China reopened today after being closed since Monday for the holidays. The former rose strongly on the day (Nikkei: +2.8%) while the latter finished up slightly after having been down for most of the trading session (Shanghai Composite: +0.3%). Looking ahead after a rather light day of news, next week in Asia the main focus will be the release of a number of economic indicators in China for the last month of 2012, including inflation and exports, as well as three monetary policy meetings in the region (Thailand, Indonesia and South Korea).

India's service sector PMI picks up in December

India's service sector PMI rose to a three month high in December, to 55.6 from 52.1 in November, led by a pick up in new business flows. Stronger December PMI outturns, both in services as well as manufacturing, alongside signs of moderating inflation underpin an improving growth outlook in India, which could be further supported by monetary policy easing by the central bank, as we expect the RBI to lower the repo rate by 25bps at its January 29th policy meeting.

Inflation in the Philippines edges up in December

The Philippines reported that inflation rose to 2.9% y/y in December (consensus: 3.1% y/y) from 2.8% y/y in November, resulting in average inflation of 3.2% for all of 2012 - at the low end of policymakers' 3%-5% target range. While we expect inflation to rise for the Philippines in 2013 (BBVA forecast: 3.9% y/y), it will likely remain comfortably within the target range set by policymakers. Therefore, we believe monetary policy will continue to remain accommodative (the central bank lowered the policy rate to a record low of 3.5% this year in order to support growth) despite recent signs of a pickup in the region's growth momentum.

Indicator of the Week

China: CPI Inflation for December (January 11)

Forecast: 2.3% y/y	Consensus: 2.4% y/y	Prior: 2.0% y/y
--------------------	---------------------	-----------------

China's December inflation will likely show an increase from the prior month due to strengthening domestic demand as well as rising food prices. Recent economic indicators (including December PMI) have pointed to an ongoing rebound in China's growth momentum, driven by an increase in domestic demand, lending support to the prices of raw materials and other commodities. Meanwhile, food prices continue to increase prior to the Chinese New Year. Looking ahead, inflation is expected to rise further in 2013, averaging 3.3% in 2013, up from 2.6% in 2012. That said, the general inflation outlook is expected to remain relatively benign given the government's stated targets of 4% and 3.5%, respectively, for 2012 and 2013, providing room for further monetary easing in H1 2013 if the external environment deteriorates.
