

BANCOS CENTRALES

Los datos recientes obligan al BCE a actuar de nuevo

Unidad de Escenarios Financieros

Con la participación de Miguel Jiménez y Agustín García

- El Consejo recortó el tipo de interés de referencia hasta un mínimo histórico del 0,05% y anunció un programa de compra de activos ABS (todavía sin definir) y un nuevo programa de compra de bonos garantizados.
- Los economistas del BCE revisaron sus previsiones ligeramente a la baja, aunque el tono de Draghi fue claramente más pesimista.
- La puerta sigue abierta a una flexibilización cuantitativa "pura"

De forma inesperada, el Consejo de gobierno (CG) del BCE decidió recortar el tipo de referencia principal en 10 pb hasta dejarlo en el 0,05%, un mínimo histórico, en la reunión sobre política monetaria celebrada hoy. El CG también recortó la facilidad de depósito en 10 pb hasta -0,20% y el tipo marginal de crédito en 10 pb hasta 0,30%, por lo que se mantiene la banda de fluctuación simétrica de los tipos de interés. Asimismo, el BCE decidió reforzar el paquete anunciado en junio y empezará a comprar valores respaldados por activos (ABS, por sus siglas en inglés) y bonos garantizados el mes próximo. El Sr. Draghi señaló que la decisión adoptada hoy no había sido unánime, pero destacó que una amplia mayoría se había mostrado a favor del programa. El tono sigue siendo moderado, se mantiene la tendencia a la flexibilización y sigue existiendo unanimidad en el compromiso de recurrir a otros instrumentos no convencionales. La declaración suprimió una referencia anterior según la cual los riesgos de inflación a medio plazo estaban "equilibrados en líneas generales", al tiempo que se indicó que el CG sigue de cerca los riesgos para las perspectivas de inflación. Los riesgos para las perspectivas económicas siguen estando a la baja.

En la rueda de prensa, la atención se centró en el programa de compra de ABS (ABSPP). El BCE solo comprará tramos senior de deuda y préstamos titulizados, incluidos títulos respaldados por hipotecas residenciales (RMBS, por sus siglas en inglés), así como tramos subordinados con garantías. El Sr. Draghi recalcó que esta medida va dirigida a facilitar el acceso al crédito y que, junto con las operaciones de refinanciación condicionadas a largo plazo (TLTRO), tendrá un impacto significativo en el balance del BCE (aunque no adelantó los posibles importes). El BCE ofrecerá detalles de este programa después de la reunión del CG que se celebrará el 2 de octubre.

En respuesta a una pregunta sobre la posibilidad de una flexibilización cuantitativa "pura" (es decir, la compra de activos públicos), el Sr. Draghi señaló que se había debatido esta medida y que algunos miembros del CG se habían mostrado a favor de una medida más agresiva que la "solución moderada" anunciada hoy. Esta declaración ha vuelto a poner de manifiesto la falta de consenso dentro del CG en este frente.

Por lo que respecta a los recortes de los tipos, el Sr. Draghi manifestó que la caída del tipo de interés de referencia debería asegurar una buena demanda de las TLTRO (en la subasta que se celebrará el 18 de septiembre) y añadió que no habrá más recortes de los tipos ya que el BCE se encuentra en estos momentos en el "límite inferior, en el que no serán posibles ajustes técnicos." Además, un tipo más negativo para los depósitos ayuda al BCE a mantener un tipo de cambio bajo.

Las previsiones macroeconómicas de los economistas del BCE se revisaron ligeramente a la baja a pesar del crecimiento inferior al previsto en el T2 y los débiles indicadores de confianza para el T3, pero contrastaron con la valoración pesimista del Sr. Draghi acerca de las perspectivas económicas. Los economistas del BCE esperan que el PIB crezca el 0,9% en 2014, aproximadamente un -0,2 pp más bajo en comparación con las cifras de junio, el 1,6% en 2015 (-0,1 pp en comparación con junio) y el 1,9% en 2016 (+0,1 pp). Los factores que subyacen a este escenario se mantienen prácticamente sin cambios, pero ahora incluyen las TLTRO anunciadas en junio (aunque los economistas del BCE recalcan que es probable que se subestime su impacto), mientras que se espera que las tensiones entre la UE y Rusia sobre las perspectivas comerciales de la zona euro tengan un impacto pequeño. El Sr. Draghi señaló que los riesgos continúan inclinados a la baja y que los datos preliminares hasta el mes de agosto parecen indicar que el "crecimiento cíclico está perdiendo fuerza". Nuestros cálculos apuntan a las mismas tasas de crecimiento en 2014, o incluso más bajas, ya que la zona euro tendría que crecer a tasas trimestrales de al menos un 0,3% t/t en el segundo semestre de 2014 para alcanzar ese 0,9%. La inflación anual se ha revisado a la baja en 0,1 pp hasta el 0,6% en 2014, pero permanece invariable a niveles por debajo del objetivo para 2015 y 2016 (1,1% y 1,4%, respectivamente). La ligera revisión a la baja se ha debido principalmente a la evolución de los precios de los componentes más volátiles. Una vez más, el Sr. Draghi se mostró más moderado de lo que esta ligera revisión podría indicar, recalculando que aunque las expectativas de inflación "siguen estando firmemente ancladas", los miembros del CG "perciben que han aumentado los riesgos a la baja" (debido especialmente a que se espera que la inflación siga siendo baja durante un periodo de tiempo prolongado), aunque "no perciben una deflación".

Consideramos que el escenario más probable es que el BCE permanezca a la espera de comprobar el impacto de sus dos medidas más recientes (la de hoy y la anunciada en junio). En nuestra opinión, una flexibilización cuantitativa "pura" sigue siendo una opción, con una probabilidad que ha aumentado durante el mes pasado debido al empeoramiento de las perspectivas económicas. La demanda de las TLTROs de septiembre y diciembre será clave para determinar la probabilidad de que se adopte tal medida; cuanto mayor sea la demanda, mayor será la expansión del balance y mayor será el impacto en los tipos de cambio, y menor será la probabilidad de que se materialice un programa de flexibilización cuantitativa de bonos públicos.

DESTACADO: sobre el formato del comunicado del BCE:

El aparente formato “control de cambios” que se emplea a continuación tiene por objeto facilitar el seguimiento de cambios del comunicado respecto a la anterior reunión del BCE. Mario Draghi, President of the ECB,
Frankfurt am Main, 7 August 4 September 2014

Ladies and gentlemen, the Vice-President and I are very pleased to welcome you to our press conference. We will now report on the outcome of today's meeting of the Governing Council, which was also attended by the Commission Vice-President, Mr Katainen.

Based on our regular economic and monetary analyses, we—the Governing Council decided today to keep lower the key ECB interest rates unchanged. The available information remains consistent with our assessment rate on the main refinancing operations of a continued moderate the Eurosystem by 10 basis points to 0.05% and uneven recovery of the euro-area economy, with low rates of inflation and subdued monetary and credit dynamics. At the same time, inflation expectations for the euro area over the medium to long term continue the rate on the marginal lending facility by 10 basis points to be firmly anchored in line with our aim of maintaining inflation rates below, but close to, 2%. The monetary policy measures decided in early June have led to an easing of the monetary policy stance. This is in line with our forward guidance and adequately reflects the outlook for the euro-area economy, as well as the differences in terms of the monetary policy cycle between major advanced economies. The targeted longer-term refinancing operations (TLTROs) that are to take place over the coming months will enhance our accommodative monetary policy stance. These operations will provide long-term funding at attractive terms and conditions over a period of up to four years for all banks that meet certain benchmarks applicable to their lending to the real economy. This should help to ease funding conditions further and stimulate credit provision to the real economy. As our measures work their way through to the economy they will contribute to a return of inflation rates to levels closer to 2%0.30%. The rate on the deposit facility was lowered by 10 basis points to -0.20%. In addition, the Governing Council decided to start purchasing non-financial private sector assets. The Eurosystem will purchase a broad portfolio of simple and transparent asset-backed securities (ABSs) with underlying assets consisting of claims against the euro area non-financial private sector under an ABS purchase programme (ABSPP). This reflects the role of the ABS market in facilitating new credit flows to the economy and follows the intensification of preparatory work on this matter, as decided by the Governing Council in June. In parallel, the Eurosystem will also purchase a broad portfolio of euro-denominated covered bonds issued by MFIs domiciled in the euro area under a new covered bond purchase programme (CBPP3). Interventions under these programmes will start in October 2014. The detailed modalities of these programmes will be announced after the Governing Council meeting of 2 October 2014. The newly decided measures, together with the targeted longer-term refinancing operations which will be conducted in two weeks, will have a sizeable impact on our balance sheet.

As stated previously, and as a follow-up to our decision in early June, we have intensified preparatory work related to outright purchases in the asset-backed securities market to These decisions will add to the range of monetary policy measures taken over recent months. In particular, they will support our forward guidance on the key ECB interest rates and reflect the fact that there are significant and increasing differences in the monetary policy cycle between major advanced economies. They will further enhance the functioning of the monetary policy transmission mechanism.

Looking ahead, we will maintain and support the provision of credit to the broad economy. In our analysis, we took into account the overall subdued outlook for inflation, the weakening in the euro area's growth momentum over the recent past and the continued subdued monetary and credit dynamics. Today's decisions, together with the other measures in place, have been taken with a high degree of monetary accommodation. Concerning our forward guidance, the key ECB interest rates will remain at present levels for an extended period of time in view of the current outlook for inflation. Moreover, the Governing Council is unanimous in its commitment to also using unconventional instruments within its mandate, should it become necessary to further address risks of too prolonged a period of low inflation. We are strongly determined to safeguard to underpinning the firm anchoring of medium to long-term inflation expectations over the medium to long term, in line with our aim of maintaining inflation rates below, but close to, 2%. As our measures work their way through to the economy they will contribute to a return of inflation rates to levels closer to 2%. Should it become necessary to further address risks of too prolonged a period of low inflation, the Governing Council is unanimous in its commitment to using additional unconventional instruments within its mandate.

Let me now explain our assessment in greater detail, starting with the **economic analysis**. In the first quarter of this year euro area real GDP rose by 0.2%, quarter on quarter. With regard to the second quarter, monthly indicators have been somewhat volatile, partly reflecting technical factors. Overall, recent information, including survey data available for July, remains consistent with our expectation of a continued moderate and uneven recovery of the euro area economy. Looking ahead, domestic Following four quarters of moderate expansion, euro area real GDP remained unchanged in the second quarter of this year compared with the previous quarter. While it partly reflected one-off factors, this outcome was weaker than expected. With regard to the third quarter, survey data available up to August indicate a loss in cyclical growth momentum, while remaining consistent with a modest expansion.

Domestic demand should be supported by a number of factors, including the accommodative monetary policy stance and measures, the ongoing improvements in financial conditions. In addition, the progress made in fiscal consolidation and structural reforms, as well as gains in and lower energy prices supporting real disposable income, should make a positive contribution to economic growth. Furthermore, demand for exports should benefit from the ongoing global recovery. However, although labour markets have shown some further signs of improvement, At the same time, the recovery is likely to continue to be dampened by high unemployment remains high in the euro area and, overall, sizeable unutilised capacity continues to be sizeable. Moreover, the annual rate of change of continued negative MFI loans loan growth to the private sector remained negative in June and the necessary balance sheet adjustments in the public and private sectors are likely to continue to dampen the pace of the economic recovery. Looking ahead, the key factors and assumptions shaping the outlook for growth need to be monitored closely.

These elements are reflected in the September 2014 ECB staff macroeconomic projections for the euro area, which foresee annual real GDP increasing by 0.9% in 2014, 1.6% in 2015 and 1.9% in 2016. Compared with the June 2014 Eurosystem staff macroeconomic projections, the projections for real GDP growth for 2014 and 2015 have been revised downwards and the projection for 2016 has been revised upwards.

The Governing Council sees the risks surrounding the economic outlook for the euro area remain on the downside. In particular, heightened geopolitical risks, as well as developments in emerging market economies and global financial markets, may have the potential to affect economic conditions negatively, including through effects on energy prices and global demand for euro area products. A further In particular, the loss in economic momentum may dampen private investment, and heightened geopolitical risks could have a further negative impact on business and consumer confidence. Another downside risk relates to insufficient structural reforms in euro area countries, as well as weaker than expected domestic demand.

According to Eurostat's flash estimate, euro area annual HICP inflation was 0.43% in July/August 2014, after 0.54% in June/July. This decline reflects primarily lower energy price inflation, while the other main components of the HICP remained broadly unchanged, unchanged in aggregate. Inflation rates have now remained low for a considerable period of time. As said, today's decisions, together with the other measures in place, have been taken to underpin the firm anchoring of medium to long-term inflation expectations, in line with our aim of maintaining inflation rates below, but close to, 2%. On the basis of current information, annual HICP inflation is expected to remain at low levels over the coming months, before increasing gradually during 2015 and 2016. Meanwhile, inflation expectations for the euro area over the medium to long term continue to be firmly anchored in line with our aim of maintaining inflation rates below, but close to, 2%.

The Governing Council sees both upside and downside risks to the outlook for price developments as limited and broadly balanced over the medium term. The September 2014 ECB staff macroeconomic projections for the euro area foresee annual HICP inflation at 0.6% in 2014, 1.1% in 2015 and 1.4% in 2016. In comparison with the June 2014 Eurosystem staff macroeconomic projections, the projection for inflation for 2014 has been revised downwards. The projections for 2015 and 2016 have remained unchanged.

The Governing Council, taking into account the measures decided today, will continue to closely monitor the risks to the outlook for price developments over the medium term. In this context, we will closely monitor the focus in particular on the possible repercussions of heightened dampened growth dynamics, geopolitical risks and developments, exchange rate developments and the pass-through of our monetary policy measures.

Turning to the **monetary analysis**, data for June/July 2014 continue to point to subdued underlying growth in broad money (M3), with annual growth standing at 1.58% in June/July, compared with 1.06% in May/June. The growth of the narrow monetary aggregate M1 stood at 5.36% in June/July, up from 5.04% in May/June. The increase in the MFI net external asset position, reflecting in part the continued interest of international investors in euro area assets, remained an important factor supporting annual M3 growth.

The annual rate of change of loans to non-financial corporations (adjusted for loan sales and securitisation) remained negative at -2.3% in June, compared with -2.5% in May and -3.2% in February. % in July, unchanged compared with the

previous month. However, net redemptions were again sizeable in July. Lending to non-financial corporations continues to be weak, reflecting the lagged relationship with the business cycle, credit risk, credit supply factors and the ongoing adjustment of financial and non-financial sector balance sheets. At the same time, in terms of monthly flows, loans to non-financial corporations have shown some signs of a stabilisation over recent months, after recording sizeable negative monthly flows earlier in the year. This is consistent with the results of the bank lending survey for the second quarter of 2014 in which banks reported that credit standards for loans to enterprises had eased in net terms. However, they remain rather tight overall, when seen from a historical perspective. In addition, banks reported an improvement in net loan demand by non-financial corporations and households. The annual growth rate of loans to households (adjusted for loan sales and securitisation) was 0.5% in June/July, broadly unchanged since the beginning of 2013.

Against the background of weak credit growth, the ECB's ongoing ECB is finalising the comprehensive assessment of banks' balance sheets, which is of key importance. Banks should take full advantage of this exercise to improve their capital position, thereby supporting the scope for credit expansion during the next stages of the recovery to overcome credit supply constraints.

To sum up, a cross-check of the outcome of the economic analysis indicates that the current low level of inflation should be followed by a gradual upward movement in HICP inflation rates towards levels closer to 2%. A cross-check with the signals coming from the monetary analysis confirms this picture led the Governing Council to decide on measures to provide further monetary policy accommodation and to support lending to the real economy.

With regard to structural reforms, important steps have been taken in several Member States, while in others such measures still need to be legislated for and implemented. These efforts now clearly need to gain momentum to achieve higher sustainable growth and employment in the euro area. Determined structural reforms in product and labour markets as well as action to improve the business environment are warranted. As regards fiscal policies, comprehensive fiscal consolidation in recent years has contributed to reducing budgetary imbalances. Important structural reforms have increased competitiveness and the adjustment capacity of countries' labour and product markets. These efforts now need to gain momentum to enhance the euro area's growth potential. Structural reforms should focus on fostering private investment and job creation. To restore sound public finances, euro Euro area countries should proceed in line with the Stability and Growth Pact and should not unravel the progress made with fiscal consolidation. Fiscal consolidation should be designed in a growth-friendly way and should proceed in line with the Stability and Growth Pact. The Pact acts as an anchor for confidence, and the existing flexibility within the rules allows the budgetary costs of major structural reforms to be addressed and demand to be supported. There is also leeway to achieve a more growth-friendly composition of fiscal policies. A full and consistent implementation of the euro area's existing fiscal and macroeconomic surveillance framework is key to bringing down high public debt ratios, to raising potential growth and to increasing the euro area's resilience to shocks.
