

BANCOS CENTRALES

El BCE permanece paciente

Agustín García / Juan Navarro / Cristina Varela

- Tal como se esperaba, el BCE no ha actuado y mantiene inalterada su comunicación
- El BCE señaló que, a pesar de las recientes mejoras, el riesgo que rodea el panorama económico presenta un sesgo a la baja debido a factores globales. Con respecto a la inflación, tal como se esperaba, el BCE ha puesto el foco en la inflación subyacente, que sigue renqueando, en lugar de hacer hincapié en reciente repunte de la inflación general, tratando así de amortiguar cualquier preocupación al respecto.
- Draghi señaló que no se había abordado el tema del *tapering* evitando cualquier especulación sobre este tema.

Como era de esperar, no hubo cambios en la orientación de la política monetaria del BCE, ya que el Banco decidió mantener sin cambios el tipo de interés de referencia en el 0,0% y el tipo de depósito en el -0,4%. En cuanto a las medidas de política monetaria no convencionales, el Consejo de Gobierno confirmó las medidas adoptadas en diciembre pasado, es decir, la intención de continuar con el programa de compra de activos a un ritmo mensual de 80 mil millones de euros hasta marzo de 2017 y a un ritmo mensual de 60 mil millones de euros desde abril de hasta diciembre de 2017.

En el comunicado, el BCE destacó la reciente mejora de la perspectiva económica de la zona euro, en la que «los datos de la encuesta apuntan a un crecimiento algo más fuerte» en 4T16. No obstante, el BCE todavía aprecia riesgos a la baja para el crecimiento en la zona euro sobre todo relacionado con factores globales. El señor Draghi afirmó que «es demasiado pronto» para saber cuál será el impacto de las negociaciones del Brexit o de las políticas del gobierno de EEUU.

La cuestión clave en esta reunión fue la opinión del BCE sobre el reciente repunte de inflación. Para Draghi, su reciente aumento es debido a su componente energético, al tiempo que no aprecia una mejora convincente de la subyacente. Draghi también admitió que el aumento de la inflación general por encima de lo previsto junto con el repunte en el petróleo hizo mejorar las proyecciones macroeconómicas de los expertos en diciembre, pero el repunte a corto plazo debería ser transitorio y sin consecuencias a medio plazo. Destacó que la mejora de la inflación debe ser duradera, no transitoria y autosostenida, y que «tiene que mantenerse en ese nivel, incluso cuando deje de aplicarse la política monetaria extraordinaria», y que también debe ser para toda la zona euro más allá de la heterogeneidad entre Estados miembros (en referencia a los críticos alemanes). Además, Draghi subrayó que el riesgo de deflación «ha desaparecido en buena medida». Por otra parte, en el comunicado, se efectúan algunos cambios eliminando la redacción anterior «realizará un atento seguimiento de la evolución de las perspectivas de inflación», al tiempo que añadió que «el Consejo de Gobierno seguirá supervisando los cambios en la inflación medida en función del IACP si se considera que es transitoria y no tendrá implicaciones para las perspectivas a medio plazo para la estabilidad de los precios».

En cuanto a las conversaciones sobre el *tapering*, Draghi señaló que la cuestión no se ha abordado porque «todavía no es el momento» e insistió en que la decisión de diciembre de reducir el volumen de compras mensuales fue un proceso de recalibración pero no *tapering*. Por otra parte, no dio ninguna pista sobre el futuro proceso del *tapering* evitando cualquier especulación sobre este tema.

El Consejo de Gobierno se mostró seguro de la buena ejecución del programa de compra de activos en curso, a pesar de la reciente prórroga del programa del BCE (hasta diciembre de 2017) y proporcionó detalles sobre los programas de compras de activos con rendimientos por debajo del tipo de la facilidad de depósito (FD): la opción de comprar por debajo del tipo de depósito solo se aplica al programa PSPP y el BCE dará clara prioridad a las compras de activos por encima del tipo de depósito. En consecuencia, el importe de las compras que se deben realizar por debajo de dicho tipo podría variar entre jurisdicciones y en función del tiempo.

DESTACADO: sobre el formato del comunicado del BCE: El aparente formato “control de cambios” que se emplea a continuación tiene por objeto facilitar el seguimiento de cambios del comunicado respecto a la anterior reunión del BCE. En negro aparece la parte del comunicado que se mantiene sin cambios. En azul y subrayado las novedades de la última reunión y en rojo y tachado, el texto que no aparece en el nuevo comunicado

**Mario Draghi, President of the ECB,
Vítor Constâncio, Vice-President of the ECB,
Frankfurt am Main, ~~8 December 2016~~ 19 January 2017**

Ladies and gentlemen, ~~the first of all let me wish you a Happy New Year. The~~ Vice-President and I are very pleased to welcome you to our press conference. We will now report on the outcome of today's meeting of the Governing Council, ~~which was also attended by the Commission Vice-President, Mr Dombrovskis.~~

Based on our regular economic and monetary analyses, we ~~today conducted a comprehensive assessment~~ decided to keep the key ECB interest rates unchanged. We continue to expect them to remain at present or lower levels for an extended period of ~~the economic time~~, and inflation outlook and our monetary policy stance. As a result, ~~well past~~ the Governing Council took the following decisions in the pursuit ~~horizon~~ of its price stability objective:

~~As regards our net asset purchases. Regarding~~ non-standard monetary policy measures, ~~we confirm that~~ we will continue to make purchases under the asset purchase programme (APP) at the current monthly pace of €80 billion until the end of March 2017. ~~From and that, from~~ April 2017, our net asset purchases are intended to continue at a monthly pace of €60 billion until the end of December 2017, or beyond, if necessary, and in any case until the Governing Council sees a sustained adjustment in the path of inflation consistent with its inflation aim. ~~If, in the meantime, the outlook becomes less favourable, or if financial conditions become inconsistent with further progress towards a sustained adjustment of the path of inflation, the Governing Council intends to increase the programme in terms of size and/or duration.~~ The net purchases will be made alongside reinvestments of the principal payments from maturing securities purchased under the APP.

~~To ensure the continued smooth implementation of the Eurosystem's asset purchases, the~~ The Governing Council ~~today also decided to adjust the parameters of the APP as of January 2017 as follows. First, the maturity range of the public sector purchase programme will be broadened by decreasing the minimum remaining maturity for eligible securities from two years to one year. Second, purchases of securities under the APP with a yield to maturity~~ ~~on further details of how the Eurosystem will buy assets with yields below the interest rate on the ECB's deposit facility will be permitted to the extent necessary.~~

~~The key ECB interest rates were kept unchanged and we continue to expect them to remain under its public sector purchase programme. These decisions will be published in a separate press release at present or lower levels for an extended period of time, and well past the horizon of our net asset purchases.~~ 15.30 CET.

~~Today's extension of the asset purchase programme has been calibrated to preserve~~ The monetary policy decisions taken in December 2016 have succeeded in preserving the very substantial degree of monetary accommodation ~~favourable financing conditions that are~~ necessary to secure a sustained convergence of inflation rates towards levels below, but close to, 2% over the medium term. ~~Together with the sizeable volume of past purchases and forthcoming reinvestments, it~~

ensures that financial conditions in the euro area will remain very favourable, which continues to be crucial to achieve our objective. In particular, the extension of our purchases over a longer horizon allows for a more sustained market presence and, therefore, a more lasting transmission of our stimulus. Borrowing conditions for firms and households continue to benefit from the pass-through of our measures. This calibration reflects the moderate As expected, headline inflation has increased lately, largely owing to base effects in energy prices, but firming recovery of the euro area economy and still subdued underlying inflation pressures remain subdued. The Governing Council will closely monitor the evolution of the continue to look through changes in HICP inflation if judged to be transient and to have no implication for the medium-term outlook for price stability and, if.

A very substantial degree of monetary accommodation is needed for euro area inflation pressures to build up and support headline inflation in the medium term. If warranted to achieve its objective, the Governing Council will act by using all the instruments available within its mandate. In particular, if the outlook becomes less favourable, or if financial conditions become inconsistent with further progress towards a sustained adjustment in the path of inflation, we stand ready to increase our asset purchase programme in terms of size and/or duration.

Let me now explain our assessment in greater detail, starting with the economic analysis. Real GDP in the euro Euro area real GDP increased by 0.3%, quarter on quarter, in the third quarter of 2016, following after recording a similar pace of growth in the second quarter. Incoming data, notably survey results, point to a continuation of the somewhat stronger growth trend in the fourth last quarter of 2016. Looking further ahead, we expect the economic expansion to proceed at a moderate but firming pace. The pass-through of our monetary policy measures to the real economy is supporting domestic demand and has facilitated facilitating the ongoing deleveraging. Improvements in corporate profitability and process. The very favourable financing conditions and improvements in corporate profitability continue to promote the recovery in investment. Moreover, sustained employment gains, which are also benefiting from past structural reforms, provide support for private consumption via increases in households' real disposable income and private consumption. At the same time, there are indications signs of a somewhat stronger global recovery. However, economic growth in the euro area is expected to be damped by a sluggish pace of implementation of structural reforms and remaining balance sheet adjustments in a number of sectors. The risks surrounding the euro area growth outlook remain tilted to the downside and relate predominantly to global factors.

This assessment is broadly reflected in the December 2016 Eurosystem staff macroeconomic projections for the euro area, which foresee annual real GDP increasing by 1.7% in 2016 and 2017, and by 1.6% in 2018 and 2019. Compared with the September 2016 ECB staff macroeconomic projections, the outlook for real GDP growth is broadly unchanged. The risks surrounding the euro area growth outlook remain tilted to the downside.

According to Eurostat's flash estimate Eurostat, euro area annual HICP inflation in increased markedly from 0.6% in November 2016 was 0.6%, up further from 0.5 to 1.1% in October and 0.4% in September December. This reflected mainly a large extent a strong increase in annual energy inflation, while there are no signs yet of a convincing upward trend in underlying inflation. Looking ahead, on the basis of current oil futures prices, headline inflation rates are likely to pick up significantly further at the turn of the year, mainly owing to base effects in the near term, largely reflecting movements in the annual rate of change of energy prices. Supported However, measures of underlying inflation are expected to rise more gradually over the medium term, supported by our monetary policy measures, the expected economic recovery and the corresponding gradual absorption of slack, inflation rates should increase further in 2018 and 2019.

This pattern is also reflected in the December 2016 Eurosystem staff macroeconomic projections for the euro area, which foresee annual HICP inflation at 0.2% in 2016, 1.3% in 2017, 1.5% in 2018

and 1.7% in 2019. By comparison with the September 2016 ECB staff macroeconomic projections, the outlook for headline HICP inflation is broadly unchanged.

Turning to the monetary analysis, broad money (M3) growth moderated in October 2016 continues to expand at a robust pace, with its annual rate of growth decreasing increasing to 4.8% in November 2016, up from 4%, after 5.1.4% in September October. As in previous months, annual growth in M3 was mainly supported by its most liquid components, with the narrow monetary aggregate M1 expanding at an annual rate of 8.7.9% in November, up from 8.0% in October, after 8.4% in September.

Loan dynamics followed the path of gradual recovery observed since the beginning of 2014. The annual growth rate of change of loans to non-financial corporations increased to was 2.2% in November 2016, after 2.1% in October 2016, from 2.0% in the previous month. The annual growth rate of loans to households remained at was 1.9% in November, after 1.8% in October. Although developments in bank credit continue to reflect the lagged relationship with the business cycle, credit risk and the ongoing adjustment of financial and non-financial sector balance sheets, the monetary policy measures put in place since June 2014 are significantly supporting borrowing conditions for firms and households and thereby credit flows across the euro area. The euro area bank lending survey for the fourth quarter of 2016 indicates that credit standards for loans to enterprises are broadly stabilising, while loan demand has continued to expand at a robust pace across all loan categories.

To sum up, a cross-check of the outcome of the economic analysis with the signals coming from the monetary analysis confirmed the need to take today's monetary policy decisions so as to preserve the for a continued very substantial amount degree of monetary support that is necessary in order accommodation to secure a sustained return of inflation rates towards levels that are below, but close to, 2% without undue delay.

Monetary policy is focused on maintaining price stability over the medium term and its accommodative stance supports economic activity. As emphasised repeatedly by the Governing Council, in In order to reap the full benefits from our monetary policy measures, other policy areas must contribute much more decisively, both at the national and at the European level. The implementation of structural reforms in particular needs to be substantially stepped up to increase resilience, reduce structural unemployment and boost investment, productivity and potential output growth in the euro area. Structural reforms are necessary in all euro area countries. The focus should be on actions to raise productivity and In particular, reforms are needed to improve the business environment, including the provision of an adequate public infrastructure, which are vital to increase investment and boost job creation. The In addition, the enhancement of current investment initiatives, progress on the capital markets union and reforms that will improve the resolution of non-performing loans will also contribute positively to this objective. In an environment of accommodative monetary policy, the swift and effective implementation of structural reforms will also make the euro area more resilient to global shocks. Fiscal policies, are a priority. Fiscal policies should also support the economic recovery, while remaining in compliance with the fiscal rules of the European Union. Full and consistent implementation of the Stability and Growth Pact over time and across countries remains crucial to ensure confidence in the fiscal framework. At the same time, it is essential that all countries intensify efforts towards achieving a more growth-friendly composition of fiscal policies.
