

US-China trade truce prompted appetite for risk assets

- Positive tone in markets after the announcement of a trade tariff truce between China and the US at last weekend's G-20 summit (see).** Additionally, oil prices rebounded sharply ahead of the outcome of Thursday's OPEC meeting as potential cuts in oil supply could be implemented. Looking ahead, after the tone of last week's statement by Chairman Powell, markets will remain data-dependent, with the focus on the release of employment and consumer confidence data in the US as well as economic indicators for the EZ and China.
- Sharp increase in equity prices across the board** following the temporary trade truce between the two major economies. US and European stocks showed gains, favoured by the optimism on trade woes, while Chinese equity indices led the positive movement across Asian markets and the CNY also benefited.
- The US Treasury 10Y yield remained almost unchanged** despite better-than-expected ISM Manufacturing data (see). **In the same line, the German 10Y yield remained subdued**, hovering around 0.30% despite the release of positive confidence data for the EZ. Italy's risk premium continued to narrow amid ongoing positivism on the budget deficit issue (see).
- The USD depreciated against its main peers with the sole exception of the GBP** which remained under high pressure due to investors' concerns regarding next week's parliamentary vote on the Brexit deal. Most emerging currencies benefited from the increasing risk appetite in financial markets, the weak USD and the rebound in oil prices. The main exception was the TRY, which depreciated against the US dollar after the release of a lower-than-expected inflation figure for Turkey increased concerns for an early cut in interest rates (see).
- Crude oil prices surged ahead of potential cuts** in the upcoming OPEC meeting. They were also favoured by the cut in supply in Canada (see), while recent news of Qatar's withdrawal from OPEC apparently had no significant impact (see).
