Global Economic Outlook
2Q23
Growth and inflation are easing, but remain resilient, spurring a monetary tightening that continues to cause episodes of financial volatility

**RECENT DEVELOPMENTS IN THE WORLD ECONOMY**

- **Growth resilience**: Slow growth deceleration on tight labor markets and lingering post-covid effects.
- **Inflation persistence**: Lower inflation on eased energy prices and bottlenecks, but sticky core inflation.
- **Restrictive monetary policy**: Central banks focused on inflation; policy rates at (or close to) peak, but higher for longer.
- **Financial stress**: Bank turmoil, with contagion mostly limited to US regional banks (no financial dominance).
GDP growth is slowing down in the US, remains very moderate in the EU and has rebounded significantly more than expected in China in 1Q23

GDP: REAL GROWTH (Q/Q %)

Private consumption remains strong despite GDP easing
Resilience despite the war, supported by net exports
Sharp rebound in 1Q23 following post-covid reopening

(*) BBVA Research growth forecasts for 2Q23.
Source: BBVA Research based on data from Haver.
Activity dynamism, mainly in private consumption and the services segment, has been supported by strong labor markets and lingering reopening effects.
Headline inflation has been trending downwards, favored mainly by lower energy prices, the easing of supply bottlenecks and favorable base effects.

**INFLATION: CPI**
(Y/Y %)

**COMMODITY PRICES**
(Y/Y %, 30-DAYS MOVING AVERAGE)

Most recent data (Y/Y%):  
Gas: -67%  
Brent: -34%  
Wheat: -45%

Source: BBVA Research based on data from Haver.
Core inflation has stabilized at high levels in a context where robust demand has favored some (limited) second-round effects

**CORE INFLATION: CPI**

(Y/Y %)

**WAGE GROWTH (*)**

Reinforced prospects for growth and inflation easing despite recent resilience: credit tightening amid banking stress likely to add to monetary tightening

**BBVA RESEARCH BASELINE SCENARIO**

- **High-for-long interest rates**
  - Restrictive monetary stance, also on credit tightening and liquidity withdrawal; cautious policy reversal from 1Q24 (or later).

- **Growth slowdown**
  - Labor markets and demand will eventually ease, driving growth down despite supply normalization.

- **Gradual disinflation**
  - Contained commodity prices and limited second round effects, but inflation above targets for some time.

- **Financial volatility**
  - Relatively high volatility and limited flows to riskier assets; US banks stress, with no contagion to large banks or abroad.
Central banks will remain focused on inflation despite banking stress: after reaching restrictive levels, rates will likely remain unchanged for a long period

(*) In the case of the Eurozone, interest rates on refinancing operations. Source: BBVA Research based on Bloomberg data.

- Central banks are likely to use policy rates to fight inflation and liquidity tools to address bank stress; financial dominance is not expected, but is a risk.
- The rate hiking cycle is presumably over in the US (but one more hike is possible) and closer to its end in the EZ, where at least two more hikes are likely.
- Easing cycles are not likely before 1Q24 in the US and 4Q24 in the EZ.
- Still, Fed and ECB will maintain quantitative tightening programs in place, with a gradual and predictable liquidity withdrawal pace.
- Credit tightening and, eventually, fiscal policy are likely to help monetary policy to reign in on inflation.
GDP forecasts: up in 2023 on robust demand and easing supply shocks, but down in 2024 on the lagged impact of tighter monetary and credit conditions

- **2023** upward revisions (US: 0.3pp, EZ: 0.2pp, CHN: 0.5pp) on supportive incoming data reflecting strong private consumption (mainly in the US and China) and lower energy prices (mainly in the EZ).

- **2024** downward revisions (US: -1.2pp, EZ: -0.3pp, CHN: -0.2pp) on effects of tighter monetary policy and less supportive credit conditions, to which the recent banking stress is likely to contribute.

- Vanishing reopening effects, easing fiscal support and financial volatility are also likely to hit growth.

- **Global growth to slow** from 3.4% in 2022 to 2.9% (+0.2pp) in 2023 and 2.9% (-0.3pp) in 2024.

(Previous forecasts: 0.8% in 2023 and 1.8% in 2024 in the US, 0.6% in 2023 and 1.6% in 2024 in the Eurozone, 5.2% in 2023 and 5.0% in 2024 in China. Source: BBVA Research.)
Inflation will continue to ease, but will be more persistent than previously expected; it will be over the targets for long in the US and EZ

- Supply improvement (lower commodity prices, bottleneck normalization) and monetary tightening will pave the way for a further decline in inflation: headline inflation has peaked; core inflation is set to soon ease more significantly.

- Still, the dynamism of private consumption amid tight labor markets will favor (contained) increases in wages and profit margins, slowing inflation’s downward trend.

- In China, price pressures remain under control despite the post-covid recovery due to favorable commodity prices, supply recovery and private sector “balance sheet recession”.

Source: BBVA Research.
In an uncertain context, the risk that high inflation and tight monetary conditions triggers a recession or financial instability has increased lately.

**MAIN RISKS**

**PERSISTENT INFLATION AND TIGHT MONETARY POLICY:**
- strong demand
- tight labor markets
- China recovery
- higher commodity prices

**FINANCIAL INSTABILITY**
( contagion from US banking stress, vulnerabilities in real estate and leverage markets, non-banking sector, etc.)

**GLOBAL RECESSION**

---

**MAIN UNCERTAINTIES**

**GEOPOLITICAL TENSIONS**

**US-CHINA RIVALRY (DEGLOBALIZATION, ETC)**

**ENERGY TRANSITION AND CLIMATE CHANGE**

**SOCIAL TENSIONS AND POPULISM**
Domestic demand drives growth in 2023; downward revision for 2024
2023: strong start to the year, with consumer momentum and resilience in manufacturing

External demand slows, but more gradually than anticipated.
Boost is explained by a strong labor market: low unemployment, contained labor informality and sustained formal job creation

The labor market has shown strength given the economic dynamics at the end of 2022 and beginning of 2023, exceeding job creation expectations.
Consumption: dynamism continues in 2Q23 driven by real wage and formal employment gains

Households have gradually increased their leverage level, but it is still 1.1% below its pre-pandemic level (Jan-2020).
Investment: boost in machinery and equipment amid the normalization in manufacturing. Non-residential construction above Jan-19 level

The public sector drives non-residential construction; the residential segment 27% below its Jan-19 level, keeping total investment 2% below that same threshold.
Manufacturing: slowdown more gradual than expected. Further decline should the U.S. recession be deeper than anticipated.

Relocation of production to Mexico would improve the long-term outlook for manufacturing.
2023: resilience of private consumption. Slowdown in external demand in 2H23

GDP (ANNUAL % CHANGE, SA, REAL)

Source: BBVA Research / INEGI.

GDP (QoQ%, REAL, SA)

Carry-over effect into 2024; GDP should grow 1.8% next year.
Based on the economic growth scenario, our outlook for formal job creation improves by the end of 2023.

The job-creation dynamic will continue to support the real total wage bill, which will benefit from the expectation of lower inflation.
Total revenue was affected by the drop in oil revenues; discretionary expenditure more than offset the sharp increase in financial costs.
The 2.0 and 1.8 pp drop in the internal and external component of the Historical Balance of PSBR (% of GDP), respectively, contributed to the drop in the ratio
Public debt (as a % of GDP) will remain stable in 2023-24 and therefore the risk of losing the investment grade will be very limited

Source: BBVA Research, Bloomberg.
We expect the exchange rate to close 2023 at 18.5 MXN/USD, anticipating a gradual depreciation due to inflationary and interest rate differentials.
Key points and forecast summary
Key points

Growth and inflation are moderating, but remain resilient, supporting a monetary tightening that continues to cause volatility. The gradual slowdown in the context of robust labor markets and post-pandemic reopening. Lower inflation is due to improvements in energy prices and bottlenecks, but core inflation persists. Central banks focused on inflation; rates at (or near) peak levels but higher for longer.

Upward revision in our growth estimate for 2023 to 2.4% (previously 1.4%) due to the positive effect of 1H23; slowdown in the second half of the year due to weaker external demand

- Resilient domestic demand drives growth in 2023; the gains in real wages and employment drive private spending; in addition, consumer credit is recovering and remittances are performing well.
- The machinery and equipment segment is showing rapid dynamism in the investment segment, in light of the normalization in manufacturing.
- We anticipate lower growth in 2H23, given the weakening demand for durable goods in the US against a backdrop of high interest rates and tightening financing conditions in that country; the Mexican economy would grow 1.8% in 2024.

Better prospects for job creation in 2023. The expected inflation dynamics and upward employment revision will continue to boost the real total wage bill. We adjusted our forecast for 2024 downward in light of lower expected growth.
Key points

Inflation and Monetary Policy

The decline in inflation has been driven mainly by lower non-core inflation, but the pace of the slowdown in core inflation has also gained traction....

- We expect headline inflation to be 4.6% at the end of this year and core inflation to be 4.8%. We anticipate that both will be below 4.0% as of 2Q24.

We foresee that, with inflation declining, Banxico to initiate a downward cycle in 4Q23 to avoid a further increase in the real ex-ante rate.

- We expect the monetary rate to close 2024 at a level of 8.00%.
- Rates along the yield curve will gradually decline, discounting the eventual easing cycle to be adopted by Banxico.

Exchange rate

We expect the exchange rate to close 2023 at 18.5 MXN/USD, anticipating a gradual depreciation path due to inflationary and interest rate differentials.
