

Measuring the Inclusiveness of Financial Systems

Infographic based on the information in Camara and Tuesta (2014).
Measuring Financial Inclusion: a Multidimensional Index. BBVA Research WP 14/26

The degree of financial inclusion is determined by three dimensions: usage, barriers and access. These dimensions are, at the same time, determined by several demand-side individual level indicators for the cases of usage and barrier, and supply-side country level indicators for access. Weights assigned to the dimensions are determined endogenously.
