## In January, household and corporate deposits in Spain increased by EUR5bn (sa)

Although January is typically a month when deposits decline, both household deposits (-EUR3bn) and corporate deposits (+EUR0bn) fell less than expected. Seasonally adjusted, household deposits increased by EUR1bn and corporate deposits by EUR4bn.

- **Total deposits (including all agents and geographies) fell by EUR6bn**

Deposits by national agents and the rest of the world (i.e. non-EMU) fell by EUR9bn each, while EMU deposits increased by EUR11bn, fundamentally due to an increase in deposits by monetary financial institutions, where the performance was very similar to the same month last year.

- **In January, deposits by national agents fell by EUR9bn**

Breaking the figures down by agent, note that deposits by monetary financial institutions rose for the first time since June 2013 (+EUR1bn) and in spite of the decrease in ECB liquidity (-EUR13bn of gross loans). In addition, aggregate public-sector deposits (central government and other public administrations) fell by nearly EUR2bn. Meanwhile, deposits by other resident sectors in Spain declined by nearly EUR8bn, although the distribution by component varied: deposits by asset securitisation funds slid EUR4bn due to continued issuance amortisation and deposits by clearing houses were EUR8bn lower; however, deposits made by collective investment schemes increased by EUR4bn, due to positive investment fund performance, while the household and corporate aggregate shrank by nearly EUR3bn.

- **Aggregate household and corporate deposits, which are the important elements for the analysis of deposit performance, contracted by EUR3bn in January.**

Household deposits fell by nearly EUR3bn, while deposits by corporates remained stable. Both agents performed better than we expected in a month which traditionally sees a decline in deposits. Seasonally adjusted, the aggregate of households and corporates increased by EUR5bn, and by EUR40bn compared with January 2013.
