

## Trade Deficit in January of US\$ 1.558 billion, lower than expected

- The January Trade Balance surprised when it registered a deficit of (-)US\$1.56 billion (consensus of -US\$2.31 billion), representing an 11.68% decrease compared to January 2008.
- Exports fell -31.5%, due to the reduction in manufacturing, which decreased and represents 82.9% of the total, and in oil, which fell -54.2% and represents 12.5% of the total.
- The contraction in external demand was generalized by region, with a particular emphasis in the automobile industry and oil.
- Imports were lower by -30%, mainly due to the reduction in the purchases of intermediate goods that decreased 30.1% and represent 71.3% of imports in the month, and energy products, which were reduced (-)49.3%, although they only represent 5.18% of the total.
- The contraction in imports, more pronounced than expected, caused a lower deficit.
- The expectation of a softer slowdown in imports implied that the deficit would expand. However, the abrupt decline in purchases abroad indicated that domestic demand has deteriorated to a greater extent than anticipated.
- Outlook: The global recession is being transmitted to the trade balance in a contraction of the trade volume, and pressure on oil prices.
