Week Ahead

Empire State Manufacturing Index (June, Monday 8:30 ET)

F: -2.1 C: -5.1 P: -4.6

The recent increases in consumer confidence could help to further raise business expectations in the New York Fed's territory. Consequentially, the empire state manufacturing index is expected to improve further to -2.1% after increasing for the previous two months. These results would indicate that the contraction in the manufacturing industry is easing.

Housing Starts (May, Tuesday 8:30 ET)

F: 470K C: 483K P: 458K

Housing starts are expected to respond to some stabilization in new home sales and the recent increase in builder's confidence by rising to 470K in May after dropping to 458K in April. Although an increase in starts would be an additional indication of stabilization in the housing market, levels will remain more than 50% below those of last year, which would indicate that residential construction is still weak.

Industrial Production (May, Tuesday 9:15 ET)

F: -0.5% C: -0.8% P: -0.4%

Industrial production is expected to fall for the tenth month in a row as plants continue to reduce output in response to the ongoing decline in economic activity. However, May's ISM results indicated that the manufacturing industry is contracting at a slower pace, so we could see the rate of decline in industrial production ease as well. The accelerating decline of IP in the high tech industry due to businesses' lack of investment capital remains a concern. The continued decrease could indicate that non-residential investment will shrink further in 2Q09.

Consumer Price Index (Headline, Core) (May, Wednesday 8:30 ET)

F: 0.2%, 0.3% C: 0.3%, 0.1% P: 0.0%, 0.3%

Core consumer prices are expected to increase 0.2%, which is slower than the 0.3% in April because we are not expecting the large price increases in tobacco products to continue. On a year-over-year basis, core inflation is expected to remain low, but positive at 1.9%, which is below the historical average of 2.0%. On the other hand, headline consumer prices are forecasted to rise 0.3% in May after remaining the same in April. An 18.2% jump in gasoline prices is expected boost the energy component of headline inflation, while food prices are anticipated to continue on their downward trend.

Leading Economic Indicators Index (LEI) (May, Thursday 10:00 ET)

F: 0.5% C: 0.9% P: 1.0%

The LEI is expected to increase for the second month in a row, anticipating better economic conditions as we near the end of the second quarter. Many of the index's components improved further in May. For instance, consumer confidence reached its highest level since September 2008 and initial jobless claims dropped 1.8%. Additionally, the S&P 500 rose 4.7% and building permits are expected to increase.

Quote of the Week

Federal Reserve Bank of Richmond President Jeff Lacker: *The Economic Outlook*
North Carolina Senate Appropriations Committee, Raleigh, NC, June 10, 2009

"The challenge for us on the Federal Open Market Committee will be to shrink our balance sheet and tighten policy soon enough when the recovery emerges to prevent rising inflation. The danger will be that we will not shrink our balance sheet enough when the recovery emerges to prevent rising inflation. Choosing the right time to withdraw that stimulus will be a challenge, and I believe it will be very important to avoid the risks of waiting too long or moving too slowly."
