

## Banking Credit: Monthly Situation Report

Fco. Javier Morales E.  
fj.morales@bbva.bancomer.com

- In June 2009, the total current credit balance that commercial banks granted to the private sector saw a 3.7% real annual fall.
- Corporate and mortgage lending continued to record positive growth, although at a slower rate.
- Credit to non-banking financial intermediaries and consumers continued to post negative growth rates.

## Overall current credit from commercial banks to the non-banking private sector

In June 09, real annual overall growth in current credit from commercial banks to the private sector came in negative at -3.7%. In the previous month, this rate was also negative (down 2.8%). In the same month in 2008 growth was positive and into double digits (15.8%). A sector breakdown for the -3.7% growth rate shows: company credit accounted for 3.1 percentage points (pp) of the -3.7%; mortgage lending, 0.8 pp; non-banking financial brokers, -1.2 pp; and consumption loans, -6.4 pp.

It is worth noting that since June 09 the Bank of Mexico's statistics have not considered the consumption loan portfolio transfer to a NBF financial subsidiary, as some banks did in 2008. Now it has gone back to showing the consumption loan portfolio and NBF financial loan portfolio in the same way as it did up until Feb 08.

## Current Company Credit

In June 09, real annual corporate lending growth was 6.6%. This rate was lower than for the preceding month (7.8%) and for the same month of 2008 (21.7%). This credit grew at high rates in 2007 and 2008 when banking credit replaced external company financing. From 2008 onward the growth rate started to ease off due to the slowing economy. This has been even sharper in 2009 due to the fact that the balance has not only stopped increasing, it has actually dropped slightly since March 09.

## Current Credit to Non-banking Financial Intermediaries

The amended series of NBF credit reveals that this credit type recorded negative real annual growth rates from Nov-08 (-3.2%) to Jun-09 (-26.4%), as shown in the chart. Although the performance of this credit type is largely due to the current recession, the decline could also be a sign of, among other aspects, lower financing demand from NBFIs because companies or activities towards which they channel the credit that they receive have also been demanding less credit.

## Current Mortgage Lending

In June 09, real annual mortgage lending growth was 4.7%. Growth was higher in the preceding month (5.1%) as well as in the same month of 2008 (15.9%). The slower growth in this credit is explained by the fall in GDP and formal employment, among other factors.

## Current Consumer Loans

The modified consumption loans series that the Bank of Mexico published from Jun-09 onwards no longer refers to the consumption loan portfolio transfer to a NBF subsidiary that some banks published in 2008. In Jun 09 the real annual consumption loan growth rate was -21.3%. It was also negative in the previous month (-20.4%) and it was also lower than the same month of the previous year (positive rate, 8.5%). This new consumption loan series reveals that in 1Q08 it continued to fall at a moderate rate, and that this rate accelerated in the second and third quarters. At the start of the fourth quarter, consumption loans began to record negative growth rates, which became steeper throughout 2009. The fall in consumption loans is explained by factors such as less formal employment and the loss of household purchasing, brought about by the current recession.
