Markets on watch for fx appreciation and Sino-Japan diplomatic tensions

Asia's mid-autumn festival (Korea, Japan, Hong Kong, Taiwan, and Singapore) was marked by more focus on currencies and escalating diplomatic tensions between China and Japan over a disputed chain of islands in the East China Sea. On the currency front, the Aussie dollar fluctuated after hitting a 25-month high as the RBA signaled more hikes in interest rates. Meanwhile, the Bank of Japan intervened in FX markets again to stem the yen's rise, and China's RMB continued to appreciate as President Obama and Premier Wen met in New York. On the diplomatic front, an escalating row between China and Japan over the capture of a fishing boat in disputed waters has threatened trade relations between the world's 2nd and 3rd largest economies.

Economic indicators improving

It was a quiet week on the data front, with the few meaningful indicators that were released pointing to further economic strength. Taiwan's export orders beat market expectation with 23.3%y/y growth (consensus 21.3%). Inflation in August for Hong Kong, Malaysia, and Singapore rose slightly, within expectations. Various indicators in Japan also showed modest strength.

In the coming week...

In contrast to last week, the coming days will feature a busy data calendar. A number of countries will release trade data (watch for Korea, which posts the region's first set of monthly trade data for September), industrial production, and inflation. China will release PMI for September.

Asian currencies strengthen on rising chance of Fed easing

The US Dollar tumbled to new lows as the FOMC statement showed that Board members became more concerned on deflationary risks and would consider policy options including a second round of quantitative easing ("QE2"). Meanwhile, risk premiums associated with European debt problems fell after the successful sovereign debt auction by Ireland and Greece. This combination set the stage for further gains in Asian currencies for the third consecutive week, with AUD and KRW leading.

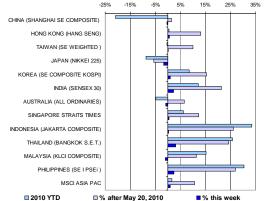

AUDUSD hit a 25-month high of 0.96 on the back of US dollar weakness and the hawkish tone of RBA. The minutes of the September policy meeting showed rising concerns about accelerating consumption growth fuelled by the mining boom and its inflationary impacts. RBA governor also put the focus of monetary policy on "managing a fairly robust upswing," pointing towards the likelihood of rates going up in the future. In the near term, the expectation of widening interest rate differentials should continue to buoy AUD.

The CNY continued to strengthen this week and reached 6.69 on Friday. The currency has appreciated by more than 2.1% since the announcement of greater exchange rate flexibility in June. Given the need for rebalancing and the threat of protectionism ahead of US midterm elections and the G20 meeting in November, we see further appreciation of CNY and in line with our 6.54 projection by end-2010.

Other Asian currencies also strengthened, counteracted by intervention fears. Besides AUD, KRW saw the largest increase in the region as the chance of an imminent rate hike is also the highest in Korea. We expect the BOK to take another step to normalize interest rate in its October meeting. THB and PHP also witnessed strong gains on the back of robust economic recoveries and prospects of further rate hikes. USDMYR continued to test new lows after breaking the key resistance level of 3.132, the lowest level since the currency was floated in 2005. We expect the divergence in monetary policy between the US and the region to continue to buoy Asian currencies.

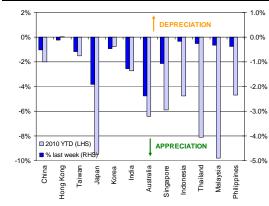

On the stock market front, Asia's markets advanced last week, with the MSCI Asia Pacific Index gained 1.01%, after the confidence in Asia's growth won the upper hand over concerns on Europe's recovery as well as weak US employment data. Thailand (3.07%) led gains in Asia, followed by and Philippines (2.50%) and India (2.30%). On the other hand, Japan, Malaysia, and Australia's markets retreated by -1.60%, -1.08%, -0.8% respectively. China's market had 0.27% loss last week. (It closed in the Mid-Autumn Festival of Sept 22-24.) This week the Asia's markets will welcome a bulk of data revealing the strength or weakness of the growth in the region. Additionally, the unexpectedly rise in the US durable good orders, released last week after the markets closed, is likely to add confidence in the global recovery.

Highlights

Australia likely to hike policy rate in October

After holding its policy rate unchanged for the past four months, minutes from the Reserve Bank of Australia's September Monetary Policy Meeting reveal that that it is likely to raise interest rates to contain inflation if the economy continues to surpass its trend growth.

Australia achieved growth at a trend pace with a stable unemployment rate in the first half year, thanks to robust exports to China and other Asian countries. While exports continue lead growth, there are signs that domestic demand is picking up. Private consumption and retail spending have risen in recent months, suggesting that households are more willing to spend. Moreover, July's Westpac leading economic index rose again to 269.5 by 0.4% (M/M), adding evidence that the economic expansion is likely to continue in coming quarters.

Therefore, chances of a 25 bps rate hike by the RBA to 4.75% at its next meeting on October 5 are increasing, in our view. The market had speculated on this by pushing up the value of the AUD, as well as the yield on 10 year government bonds. There have been six rate hikes by the RBA from last October to this May, by 25 bps each.

Is Hong Kong's economy at risk of overheating?

The Hong Kong Monetary Authority (HKMA) has just issued its latest Half-Yearly Monetary and Financial Stability Report for September 2010

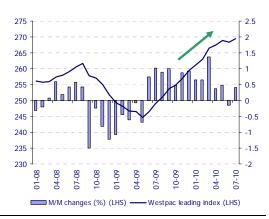

(http://www.info.gov.hk/hkma/eng/public/qb201009/E_halfyear.pdf). The publication documents the strong rebound of Hong Kong's economy, driven by a revival of exports and buoyancy in private domestic demand (GDP increased y 8.0% y/y and 6.5% y/y in the first and second quarter, respectively). According to HKMA estimates, the economy is now operating just above potential, causing inflationary pressures, which have been very modest to date, to rise (inflation in August was 3.0%y/y, but only 1.9% y/y if one-off factors are excluded). Going forward, however, the HKMA expects that a moderation in growth momentum will keep output in line with potential, and alleviate price pressures (we project overall GDP growth in 2010 to register 5.7%). Inflation may increase in coming months, however, due to a rapid rise in housing costs (see below).

At the same time, the report highlights looming risks, especially stemming from the buoyant property sector. Rising property prices have been fed by rapid credit growth and low interest rates. Housing prices increased cumulatively by 11.7% in the year through July, following a 28.5% surge in 2009. The market is now approaching 1997 peak levels (the luxury segment has already surpassed the peak), with strains on housing affordability. The authorities have responded with measures to increase housing supply and have tightened prudential regulations to curb speculation.

The booming property market highlights the dilemma for Hong Kong given its fixed exchange rate system to the USD and corresponding lax liquidity at a time when domestic conditions are strong compared with those in the U.S. The report therefore highlights that, "The main risks to monetary and financial stability in the local economy continue to be incentives for excessive leverage in an environment of prolonged low interest rate and rising inflation." In this regard, Hong Kong may very well serve as a microcosm of a broader phenomenon across the Asia region, which is growing rapidly and is beginning to see rising price pressures in an environment of lax global liquidity conditions.

China: PMI (September, October 1)

Forecast: 53.5 Consensus: 52.5 Previous: 51.7

Domestic demand has gained some strength as indicated by recent macro data on industrial production and retail sales, as well as profitability data from the logistics sector. In line with the stronger-than-expected indicators, we expect robust growth in the manufacturing sector. We project manufacturing activities to expand slightly further in September following the gain in last month. However, a weaker than expected reading could cause worries about the sustainability of economic growth.

DISCLAIMER

This document and the information, opinions, estimates and recommendations expressed herein, have been prepared by Banco Bilbao Vizcaya Argentaria, S.A. (hereinafter called "BBVA") to provide its customers with general information regarding the date of issue of the report and are subject to changes without prior notice. BBVA is not liable for giving notice of such changes or for updating the contents hereof.

This document and its contents do not constitute an offer, invitation or solicitation to purchase or subscribe to any securities or other instruments, or to undertake or divest investments. Neither shall this document nor its contents form the basis of any contract, commitment or decision of any kind.

Investors who have access to this document should be aware that the securities, instruments or investments to which it refers may not be appropriate for them due to their specific investment goals, financial positions or risk profiles, as these have not been taken into account to prepare this report. Therefore, investors should make their own investment decisions considering the said circumstances and obtaining such specialized advice as may be necessary. The contents of this document are based upon information available to the public that has been obtained from sources considered to be reliable. However, such information has not been independently verified by BBVA and therefore no warranty, either express or implicit, is given regarding its accuracy, integrity or correctness. BBVA accepts no liability of any type for any direct or indirect losses arising from the use of the document or its contents. Investors should note that the past performance of securities or instruments or the historical results of investments do not guarantee future performance.

The market prices of securities or instruments or the results of investments could fluctuate against the interests of investors. Investors should be aware that they could even face a loss of their investment. Transactions in futures, options and securities or high-yield securities can involve high risks and are not appropriate for every investor. Indeed, in the case of some investments, the potential losses may exceed the amount of initial investment and, in such circumstances, investors may be required to pay more money to support those losses. Thus, before undertaking any transaction with these instruments, investors should be aware of their operation, as well as the rights, liabilities and risks implied by the same and the underlying stocks. Investors should also be aware that secondary markets for the said instruments may be limited or even not exist.

BBVA or any of its affiliates, as well as their respective executives and employees, may have a position in any of the securities or instruments referred to, directly or indirectly, in this document, or in any other related thereto; they may trade for their own account or for third-party account in those securities, provide consulting or other services to the issuer of the aforementioned securities or instruments or to companies related thereto or to their shareholders, executives or employees, or may have interests or perform transactions in those securities or instruments or related investments before or after the publication of this report, to the extent permitted by the applicable law.

BBVA or any of its affiliates' salespeople, traders, and other professionals may provide oral or written market commentary or trading strategies to its clients that reflect opinions that are contrary to the opinions expressed herein. Furthermore, BBVA or any of its affiliates' proprietary trading and investing businesses may make investment decisions that are inconsistent with the recommendations expressed herein. No part of this document may be (i) copied, photocopied or duplicated by any other form or means (ii) redistributed or (iii) quoted, without the prior written consent of BBVA. No part of this report may be copied, conveyed, distributed or furnished to any person or entity in any country (or persons or entities in the same) in which its distribution is prohibited by law. Failure to comply with these restrictions may breach the laws of the relevant jurisdiction.

This document is provided in the United Kingdom solely to those persons to whom it may be addressed according to the Financial Services and Markets Act 2000 (Financial Promotion) Order 2001 and it is not to be directly or indirectly delivered to or distributed among any other type of persons or entities. In particular, this document is only aimed at and can be delivered to the following persons or entities (i) those outside the United Kingdom (ii) those with expertise regarding investments as mentioned under Section 19(5) of Order 2001, (iii) high net worth entities and any other person or entity under Section 49(1) of Order 2001 to whom the contents hereof can be legally revealed.

The remuneration system concerning the analyst/s author/s of this report is based on multiple criteria, including the revenues obtained by BBVA and, indirectly, the results of BBVA Group in the fiscal year, which, in turn, include the results generated by the investment banking business; nevertheless, they do not receive any remuneration based on revenues from any specific transaction in investment banking.

BBVA and the rest of entities in the BBVA Group which are not members of the New York Stock Exchange or the National Association of Securities Dealers, Inc., are not subject to the rules of disclosure affecting such members.

"BBVA is subject to the BBVA Group Code of Conduct for Security Market Operations which, among other regulations, includes rules to prevent and avoid conflicts of interests with the ratings given, including information barriers. The BBVA Group Code of Conduct for Security Market Operations is available for reference at the following web site: www.bbva.com / Corporate Governance".
