## Asia

*The most closely watched event in Asia today was Chinese Premier Wen Jiabao's wrap-up press conference at the conclusion of the annual National People's Congress (NPC). In what was expected to be an uneventful closing, Premier Wen made headlines for his wide-ranging comments on China's democratization process, growth target, currency outlook, and property price curbs. Strong indications that the latter will remain firmly in place (see below) caused a late-day selloff in China's stock market with the Shanghai composite and Hang Seng down by -2.6% and -0.1%, respectively, in sharp contrast to gains elsewhere in the region on positive momentum from global markets.*

### China's National People's Congress ends with a bang

The close of the 10-day NPC today ended with an eventful press conference by Premier Wen Jiabao. Among the most notable points were: (i) a "defense" of the lower 2012 GDP growth target (7.5%), which he said would enable the government to focus more on the quality of growth; (ii) his view that "the real effective exchange rate of the RMB may have reached its "equilibrium level" (causing 12-month NDFs to all but eliminate expectations of further appreciation) although the authorities would continue with reforms to enhance currency flexibility; and (iii) that measures to cool the property market will remain in place given the need to ensure housing affordability. The statements, by and large, do not change our view on the outlook for 2012, in which we expect overall GDP growth to reach 8.3% with support from monetary easing and fiscal stimulus, along with slower currency appreciation (expected at about 3% against the USD).

### Hints of further easing of China's credit policies to spur growth

Bloomberg reported today that the authorities are allowing three of the largest commercial banks -- ICBC, CCB and BoC -- to raise their internal loan-to-deposit (LTD) targets for 2012 in a bid to accelerate lending. The report comes after disappointing loan growth and production figures in January and February. According to the report, the new LTD targets would be in the 60%-65% range, still well below the 75% regulatory cap.

### India's inflation picks up in February on higher food prices

Wholesale price inflation unexpectedly rose in February, to 6.95% y/y from 6.55% the previous month (BBVA: 6.4% y/y; consensus: 6.7%). For additional details, [click here](#). The upturn was driven by a jump in food prices. However, core inflation declined to 5.7% y/y from 6.7% the previous month. Today's outturn, coupled with Monday's release of better-than-expected January industrial production along with concern about inflationary risk due to rising oil prices, make an interest rate cut at tomorrow's RBI policy meeting somewhat less likely than we had previously anticipated. We still expect a rate cut of 25bps if not tomorrow, then at April's policy meeting, in view of the significant deceleration in investment activity, moderation in core inflation, and likelihood of fiscal consolidation in the upcoming Union Budget which will be announced on March 16.
