

Daily Flash

Asia

Asian markets rallied strongly today on the back of Fed Chairman Bernanke's comments yesterday that US monetary policy will remain accommodative in light of weak US labor market conditions. A mix of accommodative monetary stances in the West and Japan, combined with stable interest rates in Asia could set the stage for capital inflows to the region. Gains were led by Japan (+2.4%) and Hong Kong (+1.8%), with Shanghai the outlier, down by -0.1% on news of weak industrial profits for the first two months of the year (see below).

China's authorities continue to respond to signs of capital outflows

The RMB's daily fixings have been set progressively stronger in recent days. Most likely, this reflects efforts by the authorities to counter recent market expectations of depreciation that have been driving capital outflows and suppressing asset prices. The authorities have also reportedly been taking steps to encourage inflows, the latest such move being reported today by the *Wall Street Journal* of an increase in foreign banks' long-term external debt ceilings (which are not officially disclosed). The report indicates that the ceilings are to be increased on a bank-by-bank basis, ranging from high double-digit rises to a more-than-doubling of last year's quotas. This news follows reports last week about a speeding up of approvals of other foreign investment programs such as QFII and RQFII to attract capital inflows.

China's industrial profits decline in the first two months of 2012

According to the National Bureau of Statistics, profits of medium and large industrial firms fell by -5.2% for January-February 2012, following profit growth of 25.4% in 2011. The decline was mainly due to state-owned enterprises and foreign firms, with the income of private enterprises (accounting for around 1/3 of total profits) increasing by 24.4%. The decline in overall profits is yet another indicator of slowing growth, and reinforces our expectations of monetary policy easing in the months ahead.

Briefly noted:

- **Hong Kong's February exports grew more strongly than expected**, by 14.0% y/y (consensus: 4.9% y/y) from -8.6% y/y in January, and imports in February jumped to 20.8% y/y (consensus: 9.8% y/y) from -10.5% y/y for the previous month. The large fluctuations were driven by the different timings of Chinese New Year (CNY), which fell in February last year but in January this year.
- **Fitch Ratings today affirmed Singapore's AAA rating** with a stable outlook, on its "exceptionally strong external finances, sound fiscal framework, strong investment climate and diverse, high value-added economy". That said, Fitch warned that an economic shock could have a negative impact on Singapore's credit rating.
- **Thailand raised the foreign ownership limit in domestic insurance companies** to 49% from 25%, Bloomberg reported. The move is intended to strengthen the financial position and competitiveness of domestic insurance companies.

Indicator of the Week

China: PMI for March (April 1)

Forecast: 51.0	Consensus: n/a	Prior: 51.0
<p>The official PMI outturn will be closely watched following recent indications of a further slowing in growth momentum. The private sector flash PMI estimate came in weaker than expected on March 22, raising expectations of a decline in the forthcoming PMI outturn after 3 consecutive months of a pick-up. Although underlying growth momentum is weakening, we expect the official PMI to remain unchanged from the previous month due to a seasonal rebound from the Chinese New Year in January. A more significant set of indicators will be released in mid-April, including Q1 GDP, industrial production, retail sales, and investment.</p>
