

Daily Flash

Asia

**Note to readers: due to the May 1 holiday tomorrow in Hong Kong, distribution of the Asia Daily Flash will resume on Wednesday, May 2 **

While stock exchanges are closed in Japan and China (through May 1 and 2, respectively), most regional equities were up for the day on the back of positive earnings, led by the Hang Seng (+1.7%). A number of important indicators will be released tomorrow, including China's official PMI (see Weekly Indicator below), and inflation in Korea, Indonesia and Thailand. Also, markets are watching for the Reserve Bank of Australia's rate decision, in which we expect a 25bp cut, with some market participants positioning for as much as a 50bp cut.

Taiwan's Q1 GDP rebounds, albeit below consensus

Taiwan's Q1 GDP grew by 0.4% y/y (consensus 0.9%; BBVA: 0.1%). On a sequential basis, the outturn reflected a rebound to 1.1% saar from -0.6% in Q411, when Taiwan experienced a technical recession in the second half of 2011. Although the outturn was below consensus, there are a number of positive forward-looking indicators including export orders and an upturn in March PMI. We expect the economy to grow by 3.2% in 2012.

China to introduce measures to boost imports

According to a statement posted today on the State Council's website, China plans to introduce a package of measures including lower import duties on energy products, consumer goods and key components in "strategic" emerging industries that cannot be produced locally. Details on the planned selective tariffs cuts have not yet been disclosed, including the timetable. In addition, the government is also strengthening financing services for such transactions, and encouraging commercial banks to offer credit facilities.

Indonesia to limit foreign ownership in its domestic banks

According to media sources, Bank Indonesia plans to cap individual ownership limits in domestic banks (Indonesia currently permits foreign ownership of 99% in individual financial institutions). Such a cap has been under discussion for more than a year, and would likely apply to both domestic and foreign owners. The precise form of any cap, however, remains uncertain. Domestic sources report that the new rules would still allow financial institutions to own majority stakes in domestic banks, with stricter limits applying to investors outside the financial sector. The news comes after the announcement in early April of DBS's planned \$7.3 billion purchase of Bank Danamon, whose approval could be delayed pending clarification of the new rules.

Briefly noted:

- The RMB touched a new record-high of 6.2795 per USD. While we put little weight on today's close given the holiday today in China, the move comes after a series of progressively stronger PBOC currency fixings in recent days. There is speculation in the market that the recent moves are in advance of upcoming bilateral investment talks between the US and China, scheduled to take place in Beijing during May 3-4.
- Hong Kong's March RMB deposits fell by -2.1% in March, to RMB 554 billion, a -2.1% slide from February, and the fourth consecutive monthly decline. The drop is in line with the declining trend over the past four months since reaching a peak of RMB 627 billion in November. The decline reflects both lower appreciation expectations and increasing use of offshore RMB for onshore use, including trade settlement.

• South Korea's industrial output in March contracted by -3.1% on a seasonally adjusted, m/m basis (consensus: +0.2% m/m). Slowing domestic demand, especially automobile purchases, and weaker external demand from Europe were key factors behind the decline.

Indicator of the Week

China: PMI for April (May 1)

Forecast: 53.9 Consensus: n/a Prior: 53.1

The official manufacturing PMI prints continue to be closely watched for signs of the pace of China's economic slowdown. The reading for April will be no exception, following the weaker-than-expected Q1 GDP outturn of 8.1% y/y. This past week, a flash estimate for the private sector PMI (Markit) registered an upturn (to 49.1% from a 48.3 outturn in March), but still remains below the 50-threshold. In contrast, recent official PMI outturns have been rising, and remain above 50. We expect a slight pickup in the official PMI for April, partly due to seasonal effects, as well as a pickup in domestic demand from fiscal and monetary stimulus. A strong April outturn, if confirmed, would be evidence that growth momentum has bottomed out in Q1, adding to other positive indicators, such as strong credit growth in March.
