

# Daily Flash

## Asia

*Stock markets were broadly lower today due in part to worries of a further slowdown in China, following today's disappointing data releases (below). Korea (-1.4%) and Hong Kong (-1.3%) led the market declines. Other countries in the region have also been reporting weaker-than-expected data outturns lately, with disappointing figures from India (IP) and Hong Kong (GDP) increasing prospects of further policy easing, as discussed below. The focus next week will be Japan, with the release of first quarter GDP and industrial production data.*

### China's weak April indicators reinforce expectations of policy easing

As reported today in our [China Flash](#), April's monthly batch of activity indicators were generally weaker than expected, dashing hopes of an imminent growth rebound, and raising expectations of further policy easing. Taken together, export and import outturns (released yesterday) and industrial production for April (9.3% y/y vs. consensus: 12.2% and BBVA: 10.0%) indicate that the slowdown of Q1 is continuing. As described in our just-released [China Economic Outlook](#), we maintain our full-year growth projection of 8.3% on expectations of a gradual rebound during the course of 2012 from supportive policies and as global conditions improve. However, risks are tilted to the downside given slowing momentum and the uncertain external environment.

### Hong Kong's first quarter GDP slows on exports

Hong Kong's GDP growth slowed to 0.4% y/y in the first quarter (consensus: 1.1% y/y) from a 3.0% expansion the previous quarter. The slowdown was mainly due to weakening exports (-5.7% y/y for the quarter); however, the domestic sector (including both private consumption and investment) remains resilient, providing a partial offset against the weakness in exports. Looking ahead, while downside risks remain elevated given the external environment, we are maintaining our projection of full year GDP growth of 2.9% in 2012.

### Contraction in India's March IP adds to regional growth worries

India's factory activity slipped by -3.5% y/y in March (consensus: +1.7% y/y) from +4.1% in February, driven by a contraction in manufacturing (-4.4% y/y) and mining activity (-1.3% y/y). The outturn means that for fiscal year 2012 (the year ending March 2012) IP growth was a lackluster 2.5% y/y compared to 8.2% y/y in fiscal year 2011. After the announcement, the SENSEX ended down -0.8% on the day, and for the week the index retreated by 2.0%. We believe that given the slow pace of investment policy reforms, downside risks to growth remain high in India. Attention will now turn to April's WPI inflation outturn, due on Monday, for cues regarding monetary policy. We expect the RBI to ease policy rates by another 50 bps (to 7.50%) over the course of this year.

### Briefly noted:

- Malaysia left interest rates unchanged at 3%, as expected.
- Next week will feature the release of several important economic indicators in Japan, including Q1 GDP (see Weekly Indicator below).

## Indicator of the Week

### Japan: Q1 GDP growth (May 17)

Forecast: 0.7% q/q sa

Consensus: 0.9%q/q sa

Prior: -0.2% q/q sa

After a disappointing fourth quarter in 2011 on supply disruptions from floods in Thailand, Japan's economy is expected to have rebounded in the first quarter of this year on improving exports and increased capital spending. Recent activity indicators such as industrial production and exports also point to a normalization of supply chains and production from last year's devastating earthquake and tsunami. A succession of four supplementary reconstruction budgets (totaling about 4% of GDP) continue to boost investment, and the BOJ is continuing to ease monetary policy through quantitative easing. Looking ahead, we expect the economy to expand about 2% in 2012 despite ongoing power shortages from the closure of nuclear plants and global headwinds.
