# Daily Flash

Over the past few days, policymakers in Asia have begun introducing new initiatives to support their economies. While just a coincidence, India's announcement regarding QFIs (discussed below) comes one day after Indonesia's decision to begin selling dollar term deposits onshore, both of which are noteworthy due to the growing pressures these countries have been feeling after recent currency weakness.

### India, seeking capital inflows, relaxes investment rules on QFIs

To help stem the rupee's recent losses (currently 56.09/USD, down 6.4% this month) and revive capital inflows, India announced it will allow foreign individuals to buy up to USD 1 bn worth of local corporate bonds. Also announced was the removal of a rule which established a five day time limit between the time FIIs remitted funds into India and when they were invested (there is now no time limit). Further, India relaxed rules on retail investors from the EU and gulf countries, according them with QFI status and therefore making them eligible for equity investing. We believe that while these moves are positive over the longer-term, they may not have a significant impact on the markets in the near term, as the Indian rupee has been trading near historical lows versus the dollar due to concerns regarding India's fundamentals and general global risk aversion.

### Australia's retail sales data contracts, underscoring domestic slowdown

Australia's retail sales unexpectedly fell -0.2% m/m in April (consensus: +0.2% m/m), the first decline in ten months. The weaker-than-expected sales data could increase the chances of another rate cut by the Reserve Bank of Australia during its June 5th's monetary policy meeting (though this is not in our baseline). The RBA cut the policy rate by 50bps (to its current 3.75%) in May after two cuts of 25bps apiece in November and December. We expect at least one more 25bps cut by the RBA in 2012.

### Briefly noted:

• Tomorrow brings several important data outturns, including first quarter GDP results from India and the Philippines; industrial production from Japan and South Korea (April); and Hong Kong retail sales (April).

## Indicator of the Week

## China: PMI for May (June 1)

#### Forecast: 51.5

Prior: 53.3

Weaker-than-expected activity outturns in April are causing the market to reassess expectations regarding the pace of China's growth. The official manufacturing PMI in May is thus expected to provide important signs regarding China's growth momentum. Thursday's flash estimate for private sector PMI (Markit) registered a slight downturn in May, to 48.7% from 49.1% the previous month, showing weak sentiment persists in the economy. Considering this flash outturn, as well as seasonal effects, we expect a decrease in the official PMI for May, however we expect it will remain above the +50 expansion/contraction threshold. That said, the government's recent comments emphasizing that it will help stabilize China's growth through further policy support, along with a stronger PMI outturn for May, could signal a rebound in growth momentum over the course of rest of this year.

Consensus: 52.0
