China's May PMI surprises to the downside, still showing expansion

China's official Purchasing Managers Index (PMI) for May, released today, surprised to the downside at 50.4% (BBVA: 51.5%; Consensus: 52.0%), down from 53.3% in April, but remained above the +50 expansion/contraction threshold. Similarly, private-sector (Markit) PMI also weakened from the previous month, confirming a moderating trend of the underlying growth momentum. These outturns suggest that, despite a recent reserve requirement ratio cut (of 50bps) and an increase in growth-supportive fiscal policies since mid-May, domestic demand remains weak, while at the same time external demand also remains sluggish. That said, the benefits from the previously mentioned policy support should start to have a gradual effect on growth in the coming months, and we would not rule out further policy easing; in particular, we expect another 100-150bp in cuts in the RRR in the coming quarters, and up to two interest rate cuts.

Throughout the region, weak exports outturns adding to growth concerns...

Exports in Korea fell for a third consecutive month, by -0.4% y/y in May (consensus: -1.1%), as exports to China (-10.3%), the US (-16.5% y/y), and Europe (-16.4% y/y) all contracted on an over-year basis. The trade surplus grew to US\$2.4bn in May from US\$2.1bn in April, however, due to imports contracting by -1.2% y/y. In Indonesia, exports surprised by contracting -3.5% y/y in April (consensus: +2.6% y/y), the first drop since September 2009, as oil and coal exports slowed due to weakening global demand. Imports grew by 11.7% y/y, resulting in a trade deficit of US\$641.1mn, the first such deficit since July 2010. The slowdown in exports adds to mounting worries about growth and the external outlook, and in Korea's case, increase the probability of a rate cut in the coming months.

...as inflation pressures recede

Inflationary pressures appear subdued in many parts of the region, particularly in the three countries that reported May outturns today - South Korea, Indonesia and Thailand. Korea's inflation outturn remained flat from April, rising by 2.5% y/y in May (well within policymakers' 2-4% target range). Indonesia's May inflation outturn was slightly lower (4.45% y/y in May, consensus: 4.62%), compared with April (4.5% y/y), while Thailand's inflation was broadly in line with expectations (2.53% y/y vs. consensus: 2.50% y/y), little changed from the previous month (2.47% y/y). Easing inflationary pressures will allow policymakers in these countries to focus on growth, particularly as falling oil prices should help further with regards to inflation - Brent oil finished today at US\$100.11 a barrel, down 19.8% since reaching its high for 2012 (US\$124.75) on March 16th.

Briefly noted:

- **Several important economic indicators will be released in China next week**, including industrial production (see Weekly Indicator below), inflation, investment, retail sales and external trade - though most will not be released until next weekend (June 9-10). Australia (Tuesday) and South Korea (Friday) hold policy meetings, and Australia will also announce first quarter GDP on Wednesday.

Indicator of the Week

China: Industrial output for May (June 9)

Forecast: 10.5% y/y	Consensus: 9.8% y/y	Prior: 9.3% y/y
---------------------	---------------------	-----------------

China's growth momentum moderated further in April, prompting the government to increase policy support recently. New measures have been geared towards increasing consumption and investment in infrastructure, while the central bank also decided to cut the reserve requirement ratio by 50bps on May 12th. Taking these supportive policies into account, we expect the industrial production index, a key gauge of China's growth momentum, to improve slightly in May to 10.5% in year-on-year terms, up from 9.3% in April. In addition to IP, several other important indicators will also be released next week, including inflation, retail sales, investment, and credit aggregates. Headline inflation is expected to remain low at 3.3%y/y in May (from 3.4%y/y in April) due to easing food and fuel prices, providing room for further policy easing in the coming months, if necessary.
