

Daily Flash

Asia

Disappointing growth and production outturns were the headlines of the day, with Taiwan turning in a disappointing 2Q GDP contraction and Korea posting a contraction in industrial production for the month of June (see below). The outturns are fanning speculation of further policy easing, including in Taiwan. Stock markets in Asia were up today on prospects of further easing (Kospi: +2.1%; Taiwan: +1.6%). However, for a second straight day, China's main stock market was an outlier (Shanghai Composite: -0.3%) ahead of tomorrow's release of China's official PMI, which we expect to edge up (see Weekly Indicator below), showing further signs of stabilization in the economy.

Taiwan's 2Q GDP contracts, raising possibility of rate cuts

Taiwan's preliminary Q2 GDP estimates surprised to the downside, shrinking by -0.2% y/y (consensus: 0.5% y/y; BBVA: 0.3% y/y), the first year-on-year contraction since Q3 2009. Sequentially, there was a slight pick-up to 0.8% q/q from 0.3% q/q in the first quarter. Exports and investment were the key areas of weakness. In May, the government cut its 2012 growth forecast to 2.1% from 3.0%. For the rest of the year, risks remain tilted to the downside. In the past few weeks the central bank has begun using open market operations to expand liquidity, raising expectations of an interest rate cut.

Korea's industrial output falls as economy remains under pressure

Korea's industrial production showed a surprise contraction in June (-0.4% y/y, consensus: 0.1% y/y), as the European crisis and weak external demand continue to weigh on the economy. The outturn places further pressure on Korea's policymakers, who have recently cut interest rates to counter weakening growth momentum (0.4% q/q in 2Q after 0.9% q/q in the first quarter). We think the probability of another rate cut is likely before the end of this year.

India keeps rates on hold, but growth outlook revised downwards

Bucking the recent regional trend of policy easing, the Reserve Bank of India left the benchmark repo rate unchanged at 8.0% today, as expected, citing heightened inflation risks even as growth continues to slow. With this in mind, the RBI raised its WPI inflation forecast for fiscal year 2013 (ending in March 2013) from 6.5% y/y to 7.0% y/y (BBVA: 7.1%). The RBI also revised downward its growth forecast for the same period from 7.3% to 6.5% (BBVA: 6.0%), due to a combination of the weak monsoon season, faltering industrial activity and elevated tensions in the global economy. Looking ahead, due to the significant deterioration in India's growth prospects, we expect another 50bps of cuts in the repo rate (bringing it to 7.5%) towards the end of 2012.

Briefly noted:

- **Singapore's 2Q jobless rate unexpectedly fell to 2.0%** (consensus: 2.2%) from 2.1% last quarter, as the number of employed rose by 29,200. Most of the new jobs were added in the services industry, along with increases in hiring by manufacturing and construction companies

Indicator of the Week

China: PMI for July (August 1)

Forecast: 50.7

Consensus: 50.4

Prior: 50.2

While growth momentum continued to slow in the second quarter, recent indicators suggest that the slowdown may be stabilizing on increasing policy support. Loan growth and the latest flash HSBC PMI (49.5 vs. 48.2 in June) have both improved on rising production, new orders, and new export orders. Official PMI has been trending above 50, but has weakened since April. We expect this trend to reverse in July, with a pick up to 50.7%, from 50.2% in June. Despite the weak external environment, we expect China's overall growth momentum to rise through in the second half of 2012 on increasing monetary and fiscal measures.
