China's Q2 non-performing loans increase, but not yet a concern

China's Banking Regulation Commission (CBRC) released data today on non-performing loans (NPL) for the second quarter, showing a third consecutive increase in nominal terms, to RMB 456.6 billion as of end-June, an increase of 4.2% q/q. However, given loan growth, the NPL ratio remained unchanged at 0.9%. We expect NPLs to rise more steeply in the coming quarters due to the legacy of rapid loan growth in 2008-09, along with slowing GDP growth. Though not yet a concern, rising NPLs, along with narrowing lending margins, are likely to put pressure on banks' high profit levels over the next few years (please refer to our recent [China Banking Watch](#) for details).

Contraction in Singapore retail sales as weak external demand spills over

Singapore's June retail sales fell short of expectations (-0.9% y/y, consensus: 0.1% y/y), providing the latest evidence of spillovers from slowing exports to domestic demand. Singapore's government recently lowered the top end of its 2012 GDP forecast downwards, to 2.5% from 3.0% previously, a sign that authorities are lowering expectations of a growth rebound in the second half (BBVA: 2.6%). Looking ahead, data outturns will be watched closely over the coming months, for signs of a possible easing of policy by the Monetary Authority of Singapore at its next semi-annual meeting in October, despite still-high inflation of 5.3% y/y in June.

Malaysia's Q2 GDP exceeds expectations as inflation eases

Malaysia's second quarter GDP growth accelerated to 5.4% y/y in the second quarter, from a revised 4.9% y/y the previous quarter, beating estimates (consensus: 4.6% y/y). Despite ongoing weakness in exports, resilient domestic demand (partially boosted by government spending) and a jump in investment underpinned the economy's growth in the second quarter. The positive outturn eases pressure on the central bank to cut rates amid the global downturn, with the bank's governor stating today that the current interest rate level continues to support growth. CPI inflation was also released, at 1.4% y/y in July (consensus: 1.6%) from 1.6% y/y the month before, marking the lowest rate in more than two years. Malaysia's central bank also stated that the country's growth will be towards the upper range of their estimate in 2012 of 4%-5% (BBVA: 4.2%). The authorities did state, however, that the main risks to the economy are related to growth, rather than inflation, given the uncertainties in the global environment.
