### RBA's financial stability review paints upbeat picture of banking system

Given concerns about high levels of consumer debt and an unstable global economy, the Reserve Bank of Australia's (RBA) latest financial stability report painted an upbeat picture of the domestic banking system. According to the review, this can be largely attributed to three reasons: 1) a decreasing reliance on external wholesale funding by domestic banks; 2) little direct asset exposure to the most troubled euro area; and 3) an improvement in the liquidity and capital positions of banks. Meanwhile, the banking industry's asset performance has also improved over the past 6 months, although the report did state that bank NPL ratios remain high due to bad loans in the commercial property sector. The report also showed that the business sector remains prudent about borrowing, while households continue to save and pay down debt. This review should help relieve some of the market's concerns about Australia's overall financial soundness, though the RBA did pointedly state that "with aggregate indebtedness still around historically high levels, a continuation of the recent borrowing restraint would help strengthen the financial resilience of households."

### Thai exports further contract...

Thailand's exports fell by a non-seasonally adjusted -7.0% y/y in August (consensus: -5.8% y/y), contracting further from a -4.5% y/y decline in the prior month. Imports also contracted by -8.8% y/y after a rise of 13.7% y/y in July. The outturn highlights worsening exports as the key downside risk for Thailand's growth outlook. Exports are expected to remain weak for some time given ongoing external uncertainty, with a rebound in external demand yet to materialize.

### ...while exports in Hong Kong surprise to the upside

Hong Kong's August exports increased by 0.6% y/y (consensus: -4.8% y/y), ending two straight months of over-year declines. Looking into the details, the positive outturn was mainly driven by an increase in demand from China (8.5% y/y) and Japan (4.8% y/y). However, exports remained sluggish to other major trading partners including the US, Germany and UK. Today's outturn may partially relieve some ongoing market concerns regarding the extent of the region's slowdown, especially after an improvement in Taiwan's exports orders (also driven by an increase in demand from China) that was noted in last week's *Flash*. We'll be watching closely for Korea's September outturn, which will be released on October 1<sup>st</sup>, for signs of further stabilization.

## Indicator of the Week

### Singapore CPI for August (September 24<sup>th</sup>)

Forecast: 3.7% y/y	Consensus: 3.8% y/y	Prior: 4.0% y/y
--------------------	---------------------	-----------------

Singapore's inflation has been stubbornly high in comparison to most other Asian economies, at around 5% y/y for most of 2012. However, it fell in July to 4.0% y/y on a combination of weakening demand and base effects. This month's outturn will be especially important, as it will be the last print before the next semi-annual policy meeting of the Monetary Authority of Singapore (MAS) in mid-October. Given the continued weakness in external and domestic demand, we expect the MAS to ease policy by slowing the appreciation path of the currency (the main instrument of monetary policy). However, the Fed's recent new round of QE may give the MAS some pause, as more capital inflows are likely, which could lead to asset bubbles in the property market and a pickup in inflation.
