

Daily Flash

Asia

The release of China's GDP and high frequency data today reinforced investors' perceptions of a bottoming out in growth momentum. Markets in Asia have reacted positively to the release, with the Nikkei and the Shanghai Composite rising strongly (+2.0% and +1.2% respectively). The Chinese RMB continues to post record highs against the dollar, reaching 6.246 per USD before closing at 6.254.

China's GDP slows as expected; September indicators above expectations

China's Q3 GDP growth continued to slow, to 7.4% y/y from 7.6% y/y in Q2, exactly in line with our and market expectations. Meanwhile, monthly activity indicators for September and officially reported quarterly GDP growth (which picked up to 2.2% in Q3 from 2.0% in Q2, seasonally adjusted), also released today, were better than expected, raising confidence that the slowdown in growth momentum has probably bottomed out. While it is too early to say whether this trend will be sustained, all the more so given uncertain external conditions, the stabilization in growth trends may partly reflect the positive effects of policy easing put in place earlier this year. Given room for further stimulus (inflation remains low at just 1.9% y/y in September) and risks to the growth outlook, we expect further easing in the months ahead, including another interest rate cut and two more RRR cuts, especially after the leadership selection process is completed in November. On this basis, we expect full-year GDP growth in 2012 and 2013 of 7.6% and 7.9%, respectively, slightly below our previous projections (7.8% and 8.3%, respectively).

Moody's report finds Korea's banks resilient to high household debt level

Moody's released a report today which stated Korea's banks remain resilient to the country's high household debt level (Korea's banks hold around half of the country's household debt). According to Moody's, the report found that the banks' mortgage portfolios are resilient due to low loan-to-value ratios, along with banks' focus on lending to households with above-average income and credit quality. However, the report also warned about potential 'structural challenges' in the future, mainly due to Korea's aging population as well as the high proportion of short-dated, non-amortizing mortgages that could be subject to refinancing issues during times of stress.

Briefly noted:

- **Hong Kong's unemployment rate for July-September edged up to 3.3% (consensus: 3.3%) from the previous 3.2% over June-August.** Hong Kong's labor market has remained tight despite heightened external uncertainty, supporting consumption and helping to stabilize the economy.
