## Asia

*Reversing yesterday's strong performance, Asian equities ended the week on the downside today, led by Taiwan, Korea and China (Taipei: -1.8%; Kospi: -1.7%; Shanghai: -1.7%), on concerns about weak earnings in the tech sector. For the coming week investors will be watching for the Reserve Bank of India's next policy meeting on Tuesday, where we expect a rate cut as a complement to recent positive reform measures from the government; China's official PMI is due on Thursday, where we are looking for a rebound following recent signs of stabilizing growth (see Weekly Indicator below).*

### Korean 3Q GDP slows as expected – but is it bottoming out?

Korea's third quarter GDP slowed to 0.2% q/q, seasonally adjusted, in line with expectations, and down from 0.3% in Q2. (In year-on-year terms, GDP growth slowed to 1.6% from 1.7% in Q2.) This is the slowest quarterly growth momentum since Q4 2009, although it is far better than the -4.7% plunge at the height of the global financial crisis in Q4 2008, reflecting weak investment, which was partly offset by a slight increase in domestic consumption and net exports. The outturn is indicative of the broader growth slowdown in Asia on headwinds from weak external demand. Nevertheless, we expect growth to pick up in Q4 to 0.7% q/q, which would bring full year growth to 2.3% y/y, on the effects of policy easing and a stabilization in export trends, as has already been evident in China.

### Japan unveils additional fiscal stimulus, as the BoJ prepares to act on Oct 30

Japan's government approved a larger-than-expected, although still modest, fiscal stimulus package of subsidies and grants worth 0.1% of GDP to help offset an expected economic contraction in the second half of this year. The package will be financed with funds in the budget reserve to avoid new debt issuance given Japan's extremely high public debt level. Meanwhile, data released today show that Japan's inflation fell for a fifth straight month, by -0.3% y/y (consensus: -0.4% y/y) in September. Persistent deflation is adding to pressure on the BoJ to ease policy further at its next policy meeting on October 30, given its 1% inflation target.

### Briefly noted:

- **Vietnam's exports rose by 17.9% y/y in October** from 22.1% y/y in September. The trade balance swung to a USD 0.5 bn deficit as imports also grew strongly (13.7% y/y). Though highly volatile, Vietnam's exports are performing well during the current weakening exports cycle going on in Asia.

# Indicator of the Week

## China: PMI for October (November 1)

Forecast: 50.1	Consensus: 50.5	Prior: 49.8
----------------	-----------------	-------------

The official PMI reading for October will be closely watched following positive activity data for September and an improved HSBC/Market flash PMI estimate for October. Though Q3 GDP growth slowed further, September activity indicators such as industrial production, retail sales, and investment surprised to the upside; meanwhile, the October flash HSBC/Markit PMI estimate improved to 49.1% from last month's outturn of 47.8% on improved production and new orders. We expect the October official PMI (covering larger and more domestically-oriented companies) to rise back above the 50 expansion/contraction threshold which, if confirmed, would be further evidence of stabilizing growth trends after two consecutive months of sub-50 official PMI readings. Given risks to the growth outlook, however, we still expect further policy easing in the months ahead, especially after the leadership selection process is completed in November.
