Reasons behind GVC: ***trade liberalisation***

Asia at the center of GVC

Implications of GVC

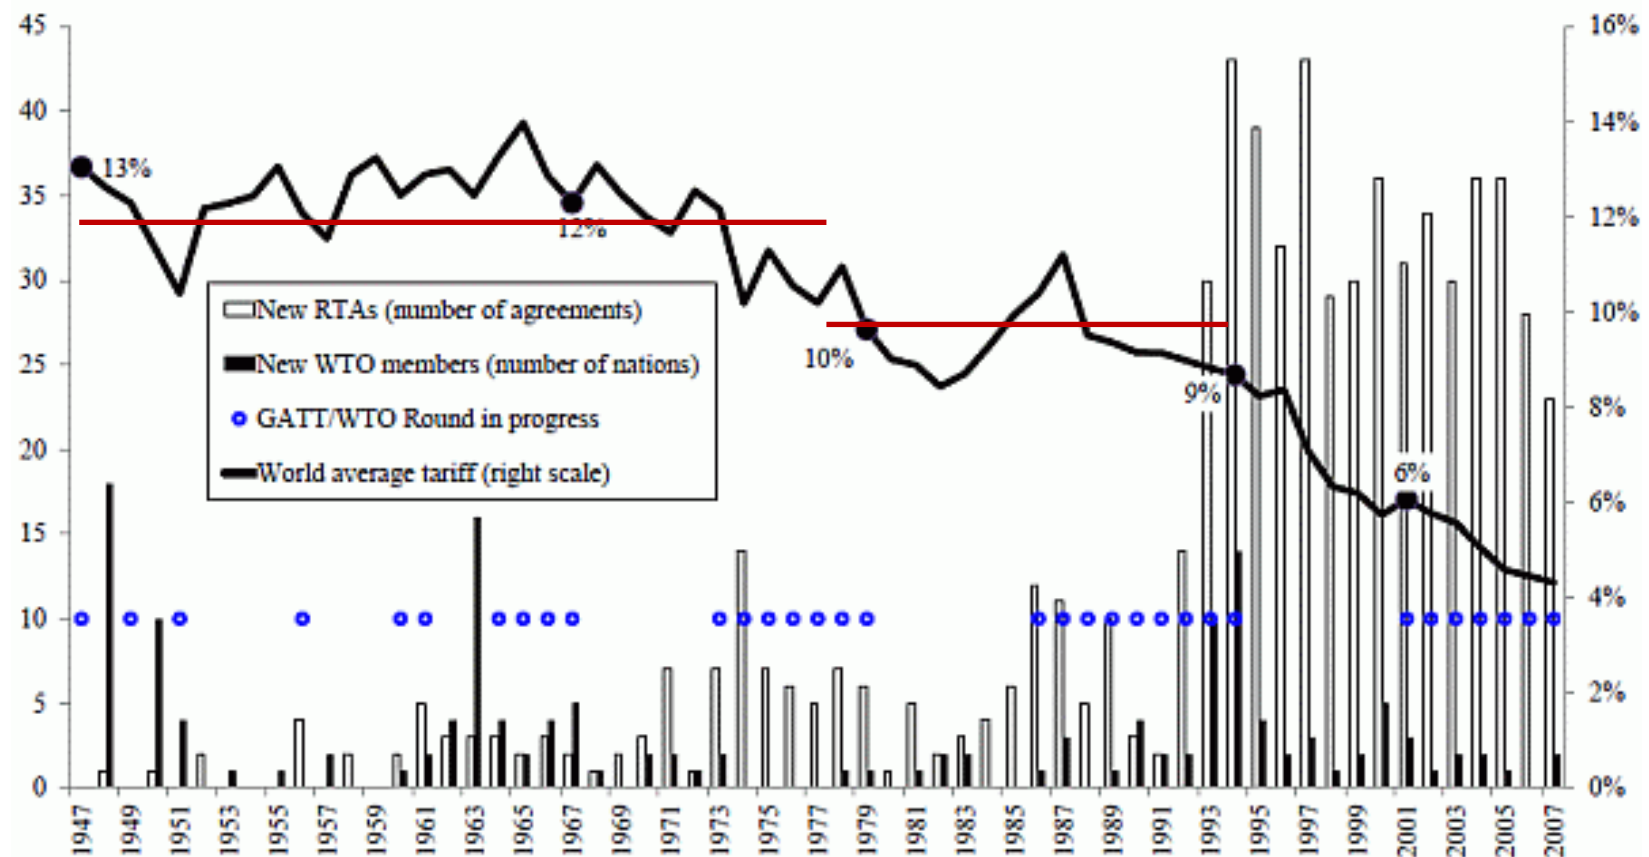

Conclusions

Trade liberalisation accelerated since mid 90s although increasingly at regional/bilateral level

Global trade liberalisation (1947-2007)

"21st Century Trade and the 21st Century WTO", Baldwin (2012)

http://www.rieti.go.jp/en/special/p_a_w/014.html

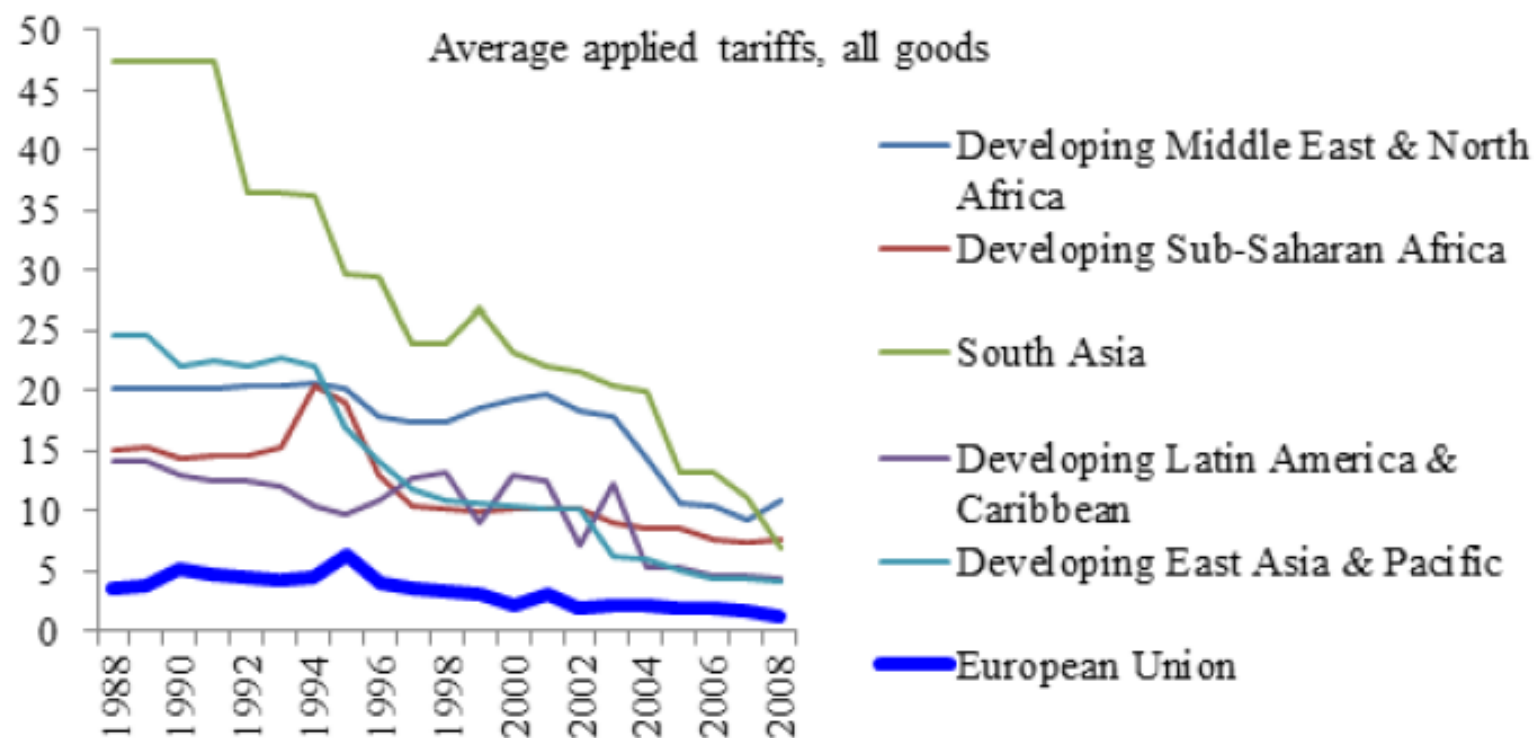

Asia among most benefited regions...

Average applied tariffs by region (%)

“Unilateral tariff liberalisation”, Baldwin (2012)

<http://www.voxeu.org/article/unilateral-tariff-liberalisation>

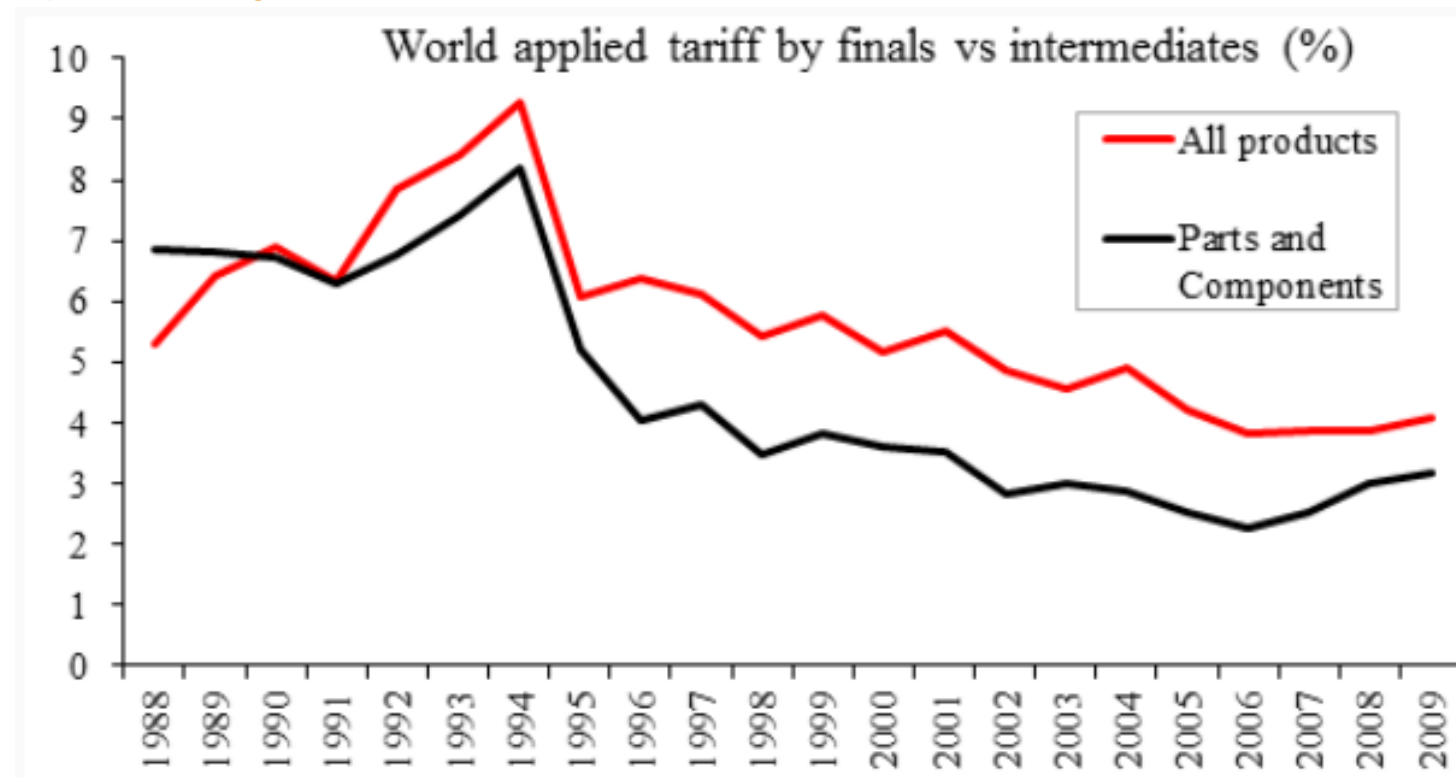

Specially for parts and components

World applied tariffs by product (%)

“Unilateral tariff liberalisation”, Baldwin (2012)

Asia leads South-South trade

Share of South-South trade flows by region

(1980-2012) (% of total exports)

Source: BBVA Research and IMF/DOTS

Index

Reasons behind GVC

Asia at the center of GVC

Implications of GVC: ***new reading required for trade figures***

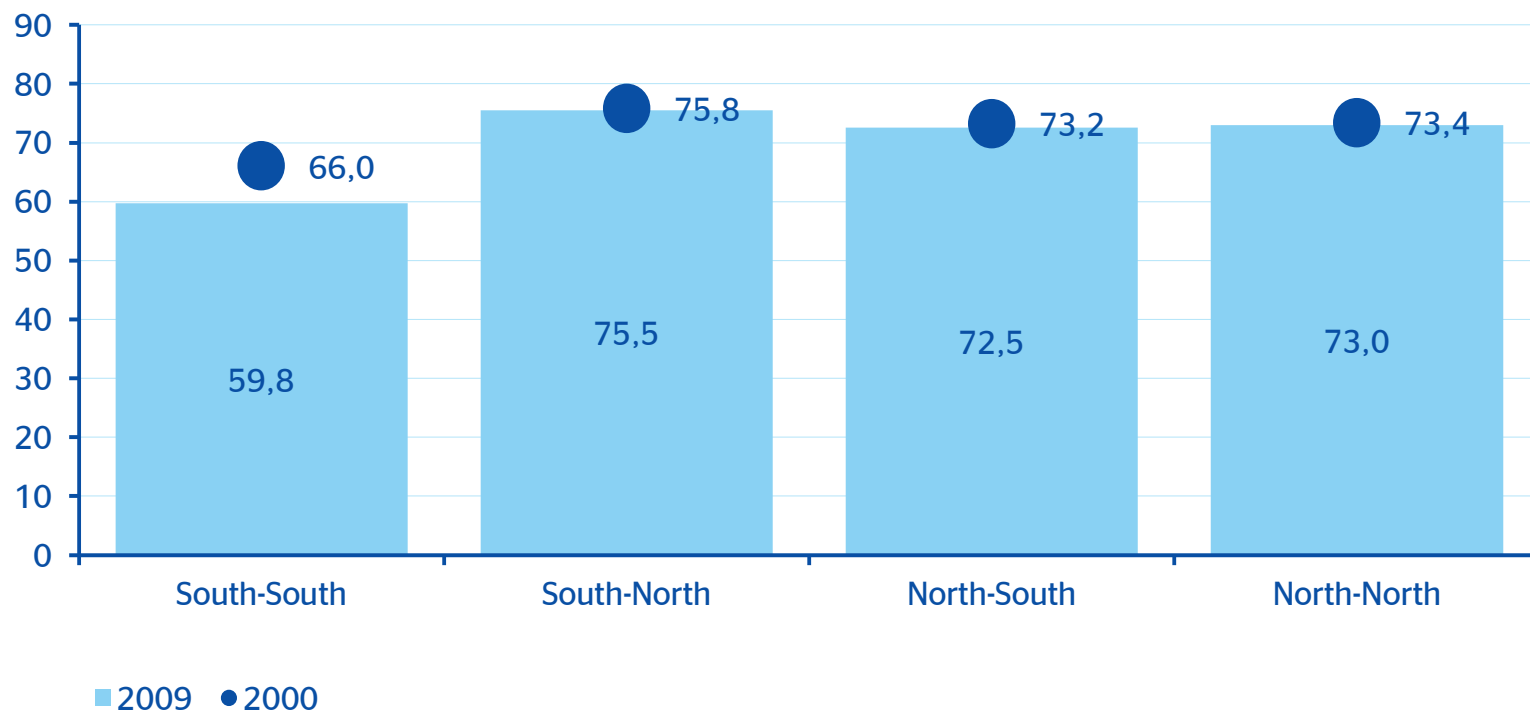

Conclusions

Value retention low (and even declining) for South-South trade

Domestic value added embodied in foreign final demand (2000 and 2009)

(% of gross exports by trade flows)

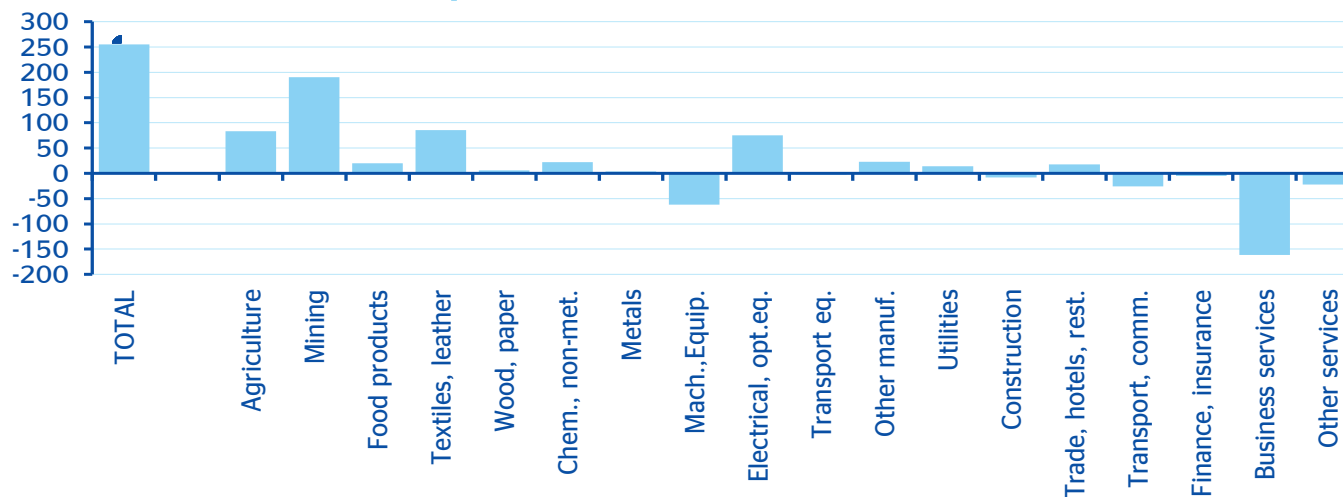

Source: BBVA Research and OECD

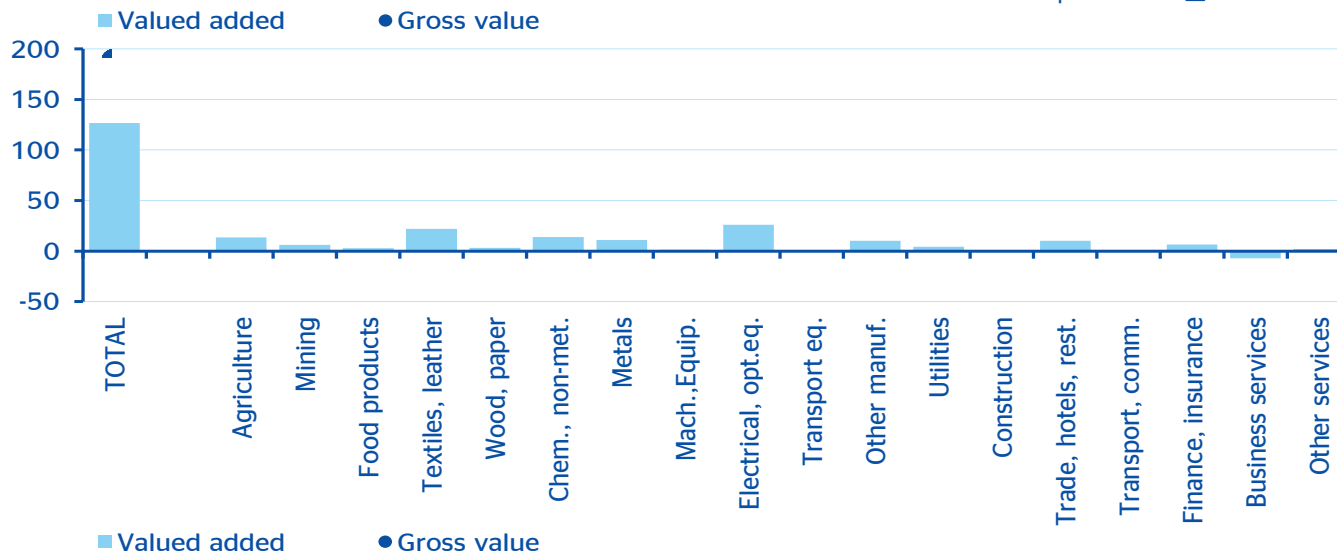

Read more at: "South-South Trade: A New Perspective Using Value-Added Data"
http://www.bbvarresearch.com/KETD/fbin/mult/1308_Eagles_SSTRADE_eng_tcm348-399034.pdf?ts=1692013

Adjustment for value added shows a different trade picture

South-North trade balance

China-US trade balance

Index

Reasons behind GVC

Asia at the center of GVC

Implications of GVC: ***increasing spillovers from trade***

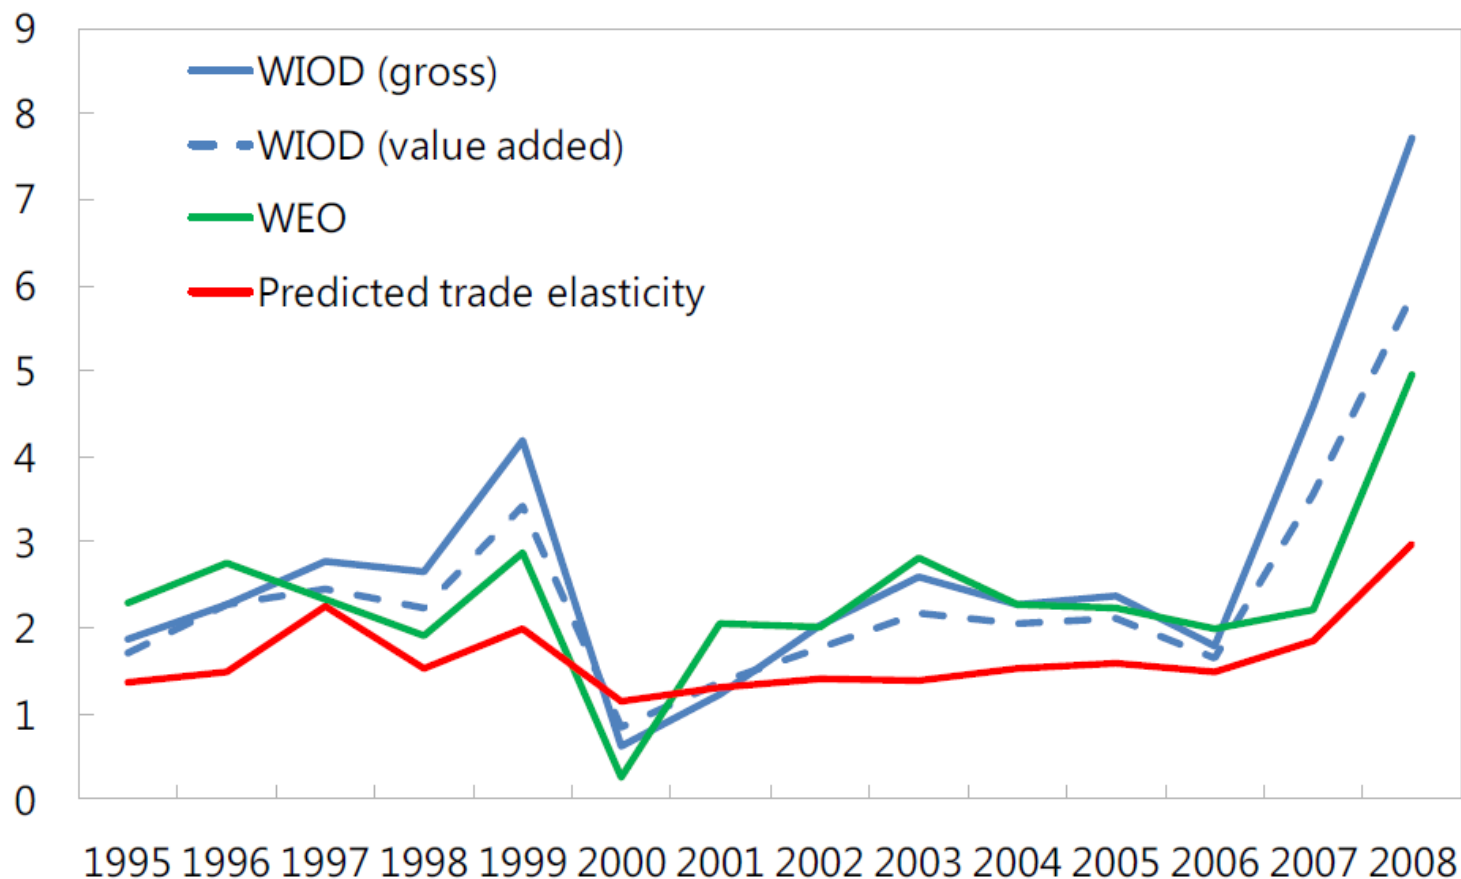

Conclusions

Higher trade sensitivity to output during recessions

Trade elasticity (real change in world exports relative to that in world output)

"Trade interconnectedness: the world with global value chains" (IMF 2013)

www.imf.org/external/np/pp/eng/2013/082613.pdf

Other factors behind higher trade elasticity during recessions:

- Inventories drawdown
- Protectionists policies
- Goods make the bulk of trade and services of GDP
- Demand home-bias (trust, financing problems)

Index

Reasons behind GVC

Asia at the center of GVC

Implications of GVC: ***how to measure competitiveness?***

Conclusions

Real exchange rates no longer a good measure

- The same level of real exchange rate appreciation is less of a problem in countries engaged in GVCs
- Exports harmed by real exchange rate appreciation but imports of parts and components cheaper
- Garcia-Herrero and Koivu (2011) estimate the price elasticity of Chinese exports and find it to be very low due to the impact of processing

Not even wages

Chen, Fung and Garcia-Herrero (2014) find empirically:

- Quality of labor (human capital) more important for trade of parts and components than for trade as a whole
- Low wages not significant in increasing exports of parts and components

Index

Reasons behind GVC

Asia at the center of GVC

Implications of GVC

Conclusions

All in all

- Trade openness is not all, key to avoid:
 - Excessive concentration (say commodities)
 - Even if not concentrated, too low value added (lack of positive externalities)
 - Looking at gross trade figures clearly not enough, even focusing on share of share of high tech exports
- Garcia-Herrero, Martinez Turegano and Ortiz (2014) construct a synthetic index of the quality of exports based on these and other criteria (10 determinants)
- In a nutshell, key for trade to be growth enhancing, in a sustainable way, is to add as much value as possible
- How?: through human capital, soft infrastructure (quality of institutions) and hard one (specially transport and logistics related), not necessarily through wages

Thank you!
