

2007 Credit Risk Conference (Hong Kong, 23 May 2007)

2008 Credit Risk Conference
- An Overview for Hong Kong
Exporters

Hong Kong, 27 May 2008

  1

This slide features a light beige background with a faint, stylized map of the world centered behind the text. Two dark blue vertical bars with a metallic sheen are positioned on either side of the central text. The text is in a blue sans-serif font. At the bottom, there is a small red and white '@rating' logo, a horizontal line, and the 'coface' logo with a small globe icon, followed by the number '1'.

Latin America and the
global slowdown:
How does it
compare with
Emerging Asia?

Alicia García-Herrero
Chief Economist for Emerging Markets
BBVA

  2

This slide has the same design as the first one, with a light beige background, a faint world map, and two dark blue vertical bars. The text is in a blue sans-serif font. At the bottom, there is a small red and white '@rating' logo, a horizontal line, and the 'coface' logo with a small globe icon, followed by the number '2'.

2007 Credit Risk Conference (Hong Kong, 23 May 2007)

Key Questions

1. Where were we then and where are we now?
 - The shock from developed to emerging economies: from a magnified to a reduced impact
2. Why?
 - Several sources of strength in emerging markets, although not the same for Asia and Latin America
 - Some weaknesses linger in both regions
3. What to expect?
 - Slowdown in emerging economies but not a marked downfall.
 - Sound performance of financial indicators unless risk scenarios unravel.

Outline

1 Where were we then and where are we now?

2. Why a milder impact? Strengths

3. Weaknesses and risks

4. What to wait for

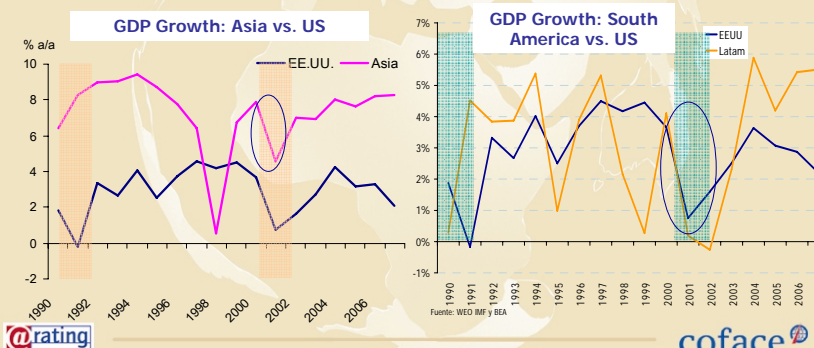

2007 Credit Risk Conference (Hong Kong, 23 May 2007)

1 Where were we then and where are we now?

- After several months into the crisis, emerging economies remain relatively unaffected by the financial turmoil.
- Current expectations bluntly different to the last crises!
- In previous instances, an **amplified financial shock** was usually translated into an **economic crisis**.
- Even when the real channel was the main responsible for the crisis, the magnifying effect has always come through the financial channel:
 - External factors: increase in risk aversion and/or foreign interest rates
 - Domestic factors: solvency, liquidity...

1 Where were we then and where are we now?

- In 2001, the U.S. recession was cushioned in Asia (GDP falls 2.9 pps in the U.S. vs. 1.1 in Asia).
- While the impact was amplified in Latin America (GDP falls 4 pps). Important to note that it coexisted with an idiosyncratic crisis (Argentina)!

2007 Credit Risk Conference (Hong Kong, 23 May 2007)

Outline

1 Where were we then and where are we now?

2. Why a milder impact? Strengths

3. Weaknesses and risks

4. What to wait for

2 Why a milder impact? Strengths

South America

Asia

1. Greater wealth (per capita GDP)

2. More domestic demand: Consumption and Investment

3. Twin surpluses

4. Stable financing: recovery of FDI and remittances

5. Debt reduction

6. Greater export diversification

7. Intense reserve accumulation

8. Financial development

9. Sounder financial system

2007 Credit Risk Conference (Hong Kong, 23 May 2007)

2 Why a milder impact? Strengths

1. Greater wealth

	South America			Asia		
	Current	2000	1995	Current	2000	1995
Per capita income USD PPP	11420	8185	7253	9980	5932	4580
Domestic demand growth contrib.	7.1	2.8	5.3	8.9	7.3	10.5
Consumption	3.4	0.6	0.8	4.05	1.7	3.6
Investment	2.3	-0.1	0.3	4.8	2.5	4.3
Ratio Investment/GDP	22.10	17.70	20.40	36.4	31	37.3

Source: BBVA based on IMF and national sources

2 Why a milder impact? Strengths

3. Tendency to twin surpluses

	South America			Asia		
	Current	2000	1995	Current	2000	1995
Fiscal balance/GDP	0.1	-2.8	-4.4	1.08	-2.1	-1.2
Current account/GDP	1.7	-1.7	-2.4	6.3	2.04	-1.98
Intal. reserves/GDP	15.00	9.80	9.70	42	21.8	14.6*

* Hong Kong not included in 1995

2007 Credit Risk Conference (Hong Kong, 23 May 2007)

2 Why a milder impact? Strengths

4. Stable financing: Recovery of FDI

12

2007 Credit Risk Conference (Hong Kong, 23 May 2007)

2 Why a milder impact? Strengths

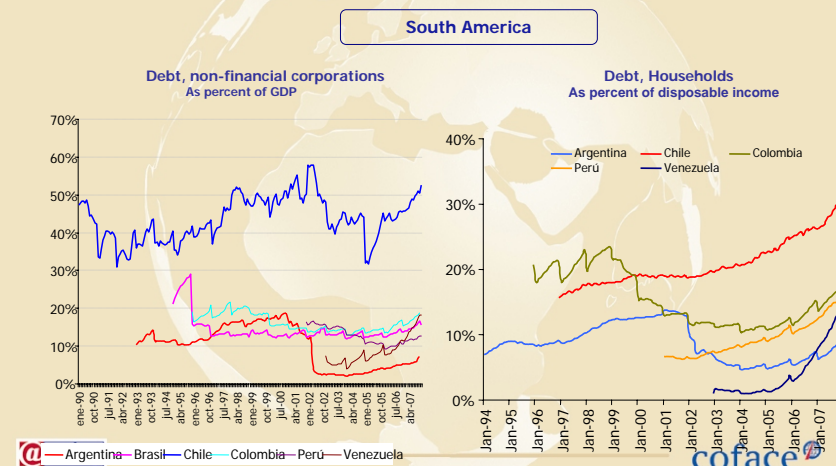

5. Debt reduction: lower public and external debt as well as debt service

	South America			Asia		
	Current	2000	1995	Current	2000	1995
Public Debt / GDP	37.3	40.4	30.4	37	40.1	30
External Debt / GDP	21.4	35.5	27.2	17.4	29.3	30.9
Debt services / GDP	3.3	7.6	3.8	1.9	4.1	3.5
External debt in USD as per cent of total	75.21	74.10	74.24	71.1	72.2	64.8

2 Why a milder impact? Strengths

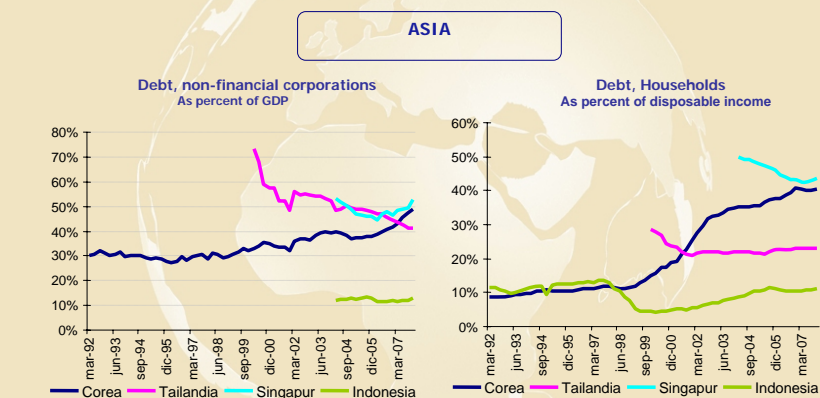

5. Debt reduction: Household & corporate debt still moderate despite recent increase

2007 Credit Risk Conference (Hong Kong, 23 May 2007)

2 Why a milder impact? Strengths

5. Debt reduction: Household and corporate indebtedness slightly higher than in South America but does not trend upwards (except for Korea).

16

2007 Credit Risk Conference (Hong Kong, 23 May 2007)

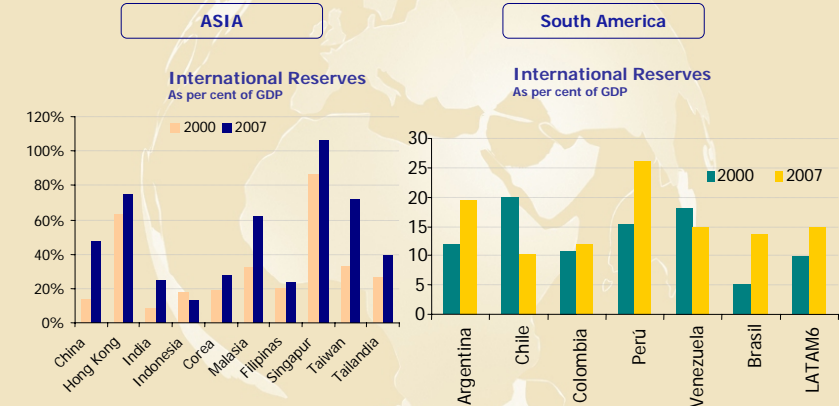

2 Why a milder impact? Strengths

6. Greater geographical export diversification although not so much true for final demand

2 Why a milder impact? Strengths

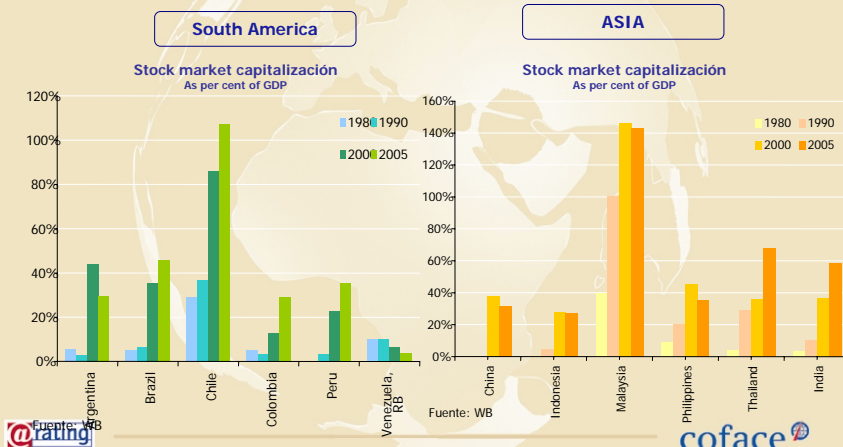

7. Intense reserve accumulation

2007 Credit Risk Conference (Hong Kong, 23 May 2007)

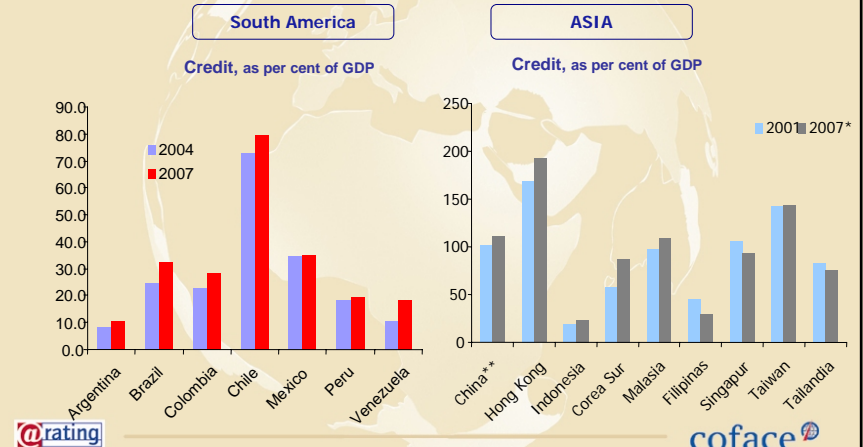

2 Why a milder impact? Strengths

8. Financial development: Capital markets are growing...

2 Why a milder impact? Strengths

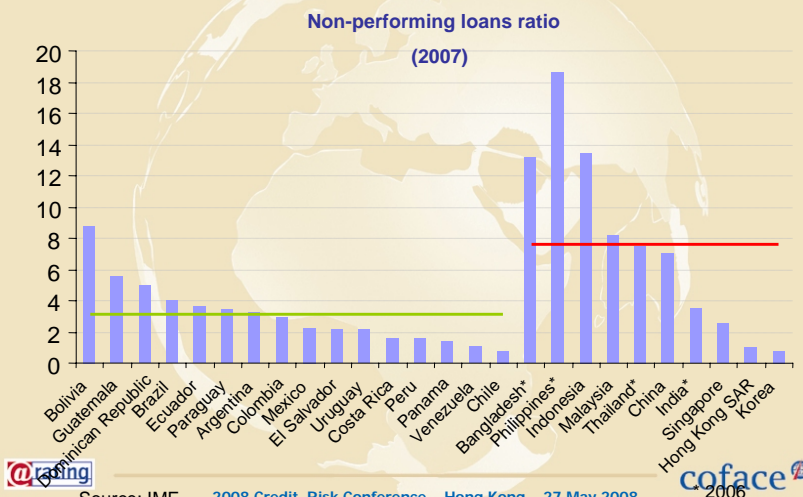

8. Financial development: But not in detriment of bank credit, which keeps on growing in both regions

2007 Credit Risk Conference (Hong Kong, 23 May 2007)

2 Why a milder impact? Strengths

9. Sounder financial system in Latin America

2008 Credit Risk Conference – Hong Kong – 27 May 2008

Outline

1 Where were we then and where are we now?

2. Why a milder impact? Strengths

3. Weaknesses and risks

4. What to wait for

2008 Credit Risk Conference – Hong Kong – 27 May 2008

2007 Credit Risk Conference (Hong Kong, 23 May 2007)

3. Weaknesses and risks

LATAM

ASIA

1. Excessive dependency from commodity prices, particularly in Argentina and Venezuela

2. Greater trade openness, but still strong reliance on US/EU demand

3. More inflation

4. Possible increase in the cost of external capital

5. Energy restrictions (Chile & Argentina) and how to share commodity boom (Argentina)

6. Colombia: risk of broken trade relations with Venezuela

2008 Credit Risk Conference – Hong Kong – 27 May 2008

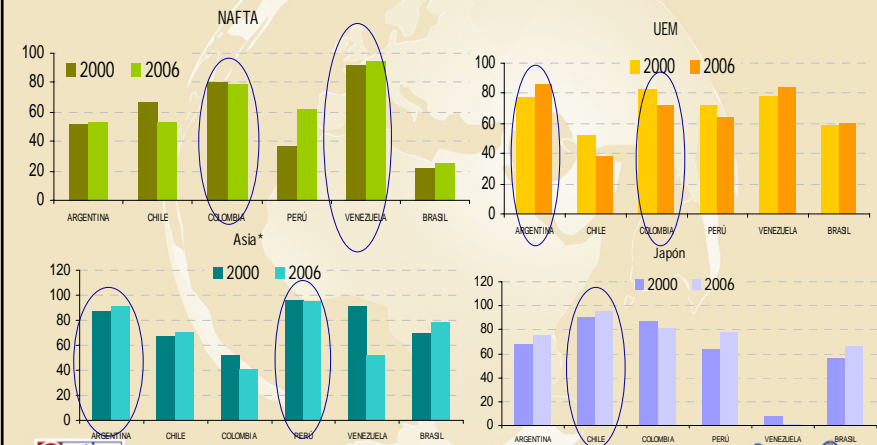

23

3. Weaknesses and risks

1. Excessive dependency from commodity prices

Raw materials exports over total, by destination

India, China, Thailand, Philippines, Malaysia, 2008 Credit Risk Conference – Hong Kong – 27 May 2008

24

2007 Credit Risk Conference (Hong Kong, 23 May 2007)

3. Weaknesses and risks

3. More inflation, more worrying in South America, insofar it is not so focused on energy and food

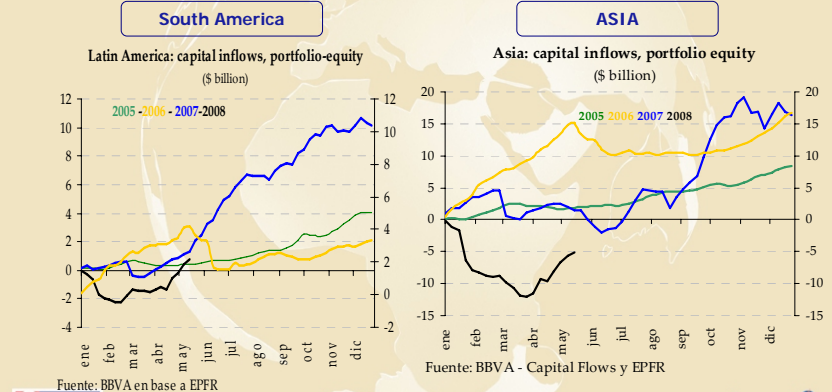

3. Weaknesses and risks

4. Possible increase in the cost of external capital

While Latin America is still generally more dependent on foreign capital, the situation has improved with reduction of debt and shift to local debt.

In addition, equity outflows have been greater in Asia.

2007 Credit Risk Conference (Hong Kong, 23 May 2007)

Outline

- 1 Where were we then and where are we now?
2. Why a milder impact? Strengths
3. Weaknesses and risks
4. What to wait for

4. What to wait for

- The gloomy global context will, no doubt, have some affect on Asia and Latin America. However, the strengths that both regions have been building since the last crises should allow them to weather the storm.
 - We estimate an average **1.5 p.p.** reduction in growth for the Latin American region in 2008
 - This could even be seen as a positive development since 2007 was the peak of the cycle and overheating a major threat
 - Very much true for Asia
- However, three major risks could considerably worsen this positive Latin American outlook
 - Sharp fall in commodity prices
 - Sharp increase in the cost of money
 - A return of high inflation

2007 Credit Risk Conference (Hong Kong, 23 May 2007)

u3 4. What to wait for

How to measure these risks?:

- 1. Commodity prices:**
 - We do not expect an immediate significant drop given supply concerns and Asian demand
 - If a 30% fall occurred, we estimate a further growth reduction of **1.5 pp** for South American countries (much higher in Argentina and Venezuela).
- 2. Cost of capital:**
 - We do not expect a sharp increase since capital outflows are turning into inflows.
 - However, if EMBI went back to levels similar to previous crises, expected additional reduction in growth of **1.5 pp** (worse for Colombia)
 - Note that 1. could be the cause of 2.!: double risk!*
- 3. Persistently higher inflation:**
 - Higher cost of money due to reaction of monetary policy
 - Back to indexation/dollarization?

 *This risk is probably orthogonal to 1&2*
