May 03rd, 2010

Weekly Highlights (26th April – 30th April 2010)

Latin American currencies displayed signs of strength this week despite an increase in both global risk aversion and regional spreads. In Mexico the economic activity surprised to the upside while in Chile the retail sector expanded, providing support to a positive performance of the GDP in spite of a sharp decline in the industrial activity (as a consequence of the earthquake). Positive news regarding the resolution of Argentinean holdouts and also regarding the improvement of credit conditions in Colombia and in Brazil. In the latter, the Central Bank started this week to adjust interest rates upwards as expected while in the former the monetary authority surprised the markets by cutting the interest rates by 50bps.

1. Argentina

- This week Luxembourg's stock exchange and Italy's Consob, the two European financial regulators whose confirmation was pending, approved Argentina's offer to swap USD 20 billion in defaulted bonds. The government announced that the exchange will be launched next week. The swap won support from Italian bondholders. Although they always showed reluctance to accept the conditions of the exchange, their legal representative said yesterday that this is the time to accept the debt offer.
- March trade balance fell to USD 311 million (USD 1 373 million in 2009). Exports grew only 11% yoy affected by some conflicts in the port of Rosario. However, our forecasts will reach 21% in a year of record crop. Imports increased 33% yoy in 1Q10, above our forecast of 31.5% for the whole year, but due to the rebuilding of inventories of intermediate goods and also the low base of the comparison period.

Argentina: Balance Trade
(Millions u\$s)

2. Brazil

- The Brazilian Central Bank decided yesterday to adjust interest rates up by 75 bps to 9.50%. Our initial call – as well as market's - was for a 50 bps adjustment. However the fast deterioration of inflation expectations observed in the last weeks and market's increasing concerns that the Central Bank could be becoming more tolerant with inflation seem to have triggered a more energetic decision. This is the first step of the monetary tightening cycle that is expected to continue during the next months.
- The unemployment rate reached 7.6% in March (7.4% in February; 9.0% in March Of 2009). The average unemployment was 7.4%, the lowest figure for the period since this statistics started being released in 2001.
- The credit stock of the economy remained stable at 45% of the GDP in March. In nominal terms, however, it continued expanded firmly (1.1% m/m; 16.8% y/y). NPL declined from 4.2% in February to 4.0% in March.

Brazil: Unemployment Rate
(%)

3. Chile

- The earthquake had a huge impact in industrial production which fell - 17.4% yoy and 19.3% in the seasonally adjusted series. However, the retail sector shows a good performance, increasing by 9.3% and 12.3% the supermarket sales and the retail sales respectively. All in all, we expect that growth will reach 1.7% in the first quarter and we keep our estimation of 4% for 2010.
- The government announced several labor initiatives, highlighting a technical body to propose to the government changes in minimum wage. This body will be integrated by three representatives of trade unions, three of the entrepreneurs and six academics.

Chile: Activity Indicators
(seasonally adjusted index, Jan.08=100)

4. Colombia

- The Central Bank cut reference interest rates by 50 bps to 3.0%. The press communiqué says that the good inflation performance and the negative output gap which allow for additional monetary stimulus.
- In March, the total loan portfolio increased 3.3% yoy and completed 5 months of expansion. Mortgage and consumption credit continue its recovery, confirming the improvement in household consumption during the last months. Commercial credit had a better performance. The loan portfolio quality indicator continues to improve, highlighting a better performance of consumption portfolio in the last 9 months.
- The national government made a debt swap with favorable results. Payments for 2010 and 2012 were reduced by 12.0% and 8.3%, respectively, and were deferred for years 2013, 2017, and 2023.

5. Mexico

- February's IGAE surprised positively (0.5% m/m actual vs -0.3 m/m estimated) due to highly volatile agriculture sector. Industry is recovering but at a slower pace than in 4Q09, expanding 0.6% mom (4.4% yoy). Manufacturing activities with tight links with the US cycle are still leading the Mexican recovery, however, domestic expenditure expected improvement should help to services sector speed up its recovery. Banxico's inflation report as of 1Q10 improves its forecasted growth from a range between 3.2% and 4.2% to range within 4.0% and 5.0%. In addition, the central bank maintains its inflation path for 2010-11 in a range between 4.75% and 5.25% in 4Q10 and convergence to its inflation objectives since 1Q11. The report also mentioned the economic slack to justify maintaining the monetary pause. This element will be the main determinant behind the beginning of the restrictive cycle around years end. Next week we will have a first clue on 2Q10 indicators through April's Consumer and Manufacturing Indicators and inflation figures.

6. Peru

- The government made some changes to the Fuel Stabilization Fund (FSF). This fund was created in 2004 with the aim of avoiding the excessive volatility of international oil prices translating into domestic fuel prices. In practice, however, the FSF has worked more as a subsidy that has cost the Government around PEN 4,5 billion (1,2% of GDP) since it was created. The first adjustment (for April) represents an increase of 7% in the final fuel price, which would have a direct impact on 2010 inflation of between 0,1pp and 0,2pp.
- The Infrastructure Investment Trust, formed by the Pension Funds Administrators (AFP) with an amount of USD 300 million (1,2% of total funds managed by the AFP), made its first investment in the infrastructure project Huascacocha through the acquisition of debt issued by the concessionaire of the project. The Trust will work as a complement to the Infrastructure Fund, set up last year by the Peruvian Government with USD 400 million with the participation of the AFP, the CAF, and the IDB.

7. Venezuela

- In the first quarter, Gross Credit decreased 2.7% (q/q). The figure represents a nominal increase of 16.4% (y/y) and a contraction of 6.7% (yoy) in real terms. Several sectors have shown positive nominal changes during last year, mainly associated with direct credit portfolios: tourism 49.7% (y/y), mortgage 40.1% (y/y), and agricultural 27.4% (y/y). By contrast, commercial and vehicles loans decreased 13.3% (y/y) and 6.7% (y/y), respectively. The non performing loan rate diminished 70 bp to mark 3.3% in March, although it is still 150 bp greater than 4 year average rate.
- Total deposit increased 2.6% (q/q) and 18.1% (y/y). In real term, deposits fell 5.4% (y/y).
- Central Bank issued a new dollar denominated bonds by USD 50 MM (to firms) and USD 20 MM (to small investors). This is the fourth bond issuance by CB in April, which could suggest a regularization of a weekly intervention about USD 50-60 MM each one.
