November 7th, 2008

Weekly Highlights (October 31th – November 7th, 2008)

Financial indicators worsen during the week, due to greater economic pessimism worldwide. The appreciation of the main Latin currencies has been partially reversed, leading to a new round central bank interventions. Latest inflation data suggest that the expected moderation of inflation is being delayed in some countries. Thus, confidence indicators (Mexico and Colombia) indicate a future deterioration of activity, although some countries still show a remarkable degree of economic dynamism (Peru and Chile). Among the effects of the crises, we highlight the capital outflow in Brazil, which have reached its highest level since 1999, fostering interventions by the Central Bank (injecting USD 46bln in currency markets). In an additional response to the crisis, Brazil and Chile announced measures to support the business sector (deferment of corporate tax payments and the improvement of credit access, respectively)

1. Argentina

- October's **fiscal revenues rose** 37.5% y/y, below the strong increase recorded in September (43% y/y). Total tax collections were \$24.276 million.
- Income tax rose 40.3% y/y in spite of the increase in personal deductions. Two taxes that registered a slow down compared to September were VAT – 24.4% y/y (42.4% y/y on September) – and export duties – 77.5% y/y after several months of increases over 100%.
- The **peso** stopped depreciating this week. To Wednesday, the exchange rate had decreased by 8 cents over last Friday.

Argentina - Selected Taxes Collection

2. Brazil

- The IBGE released the IPCA **inflation** data for October, with a 6.41% interannual rate, in line with consensus (6.40%). The September y/y rate stands well above the target of the Central Bank (4.5%). However,, recent statements by the authorities suggest that they expects a decrease in price tensions due to the current financial crisis.
- Industrial production** gave a surprise in September, with a y/y rate of 9.8% (against market consensus of 8.6%). Nevertheless, the worsening of financial conditions in Brazil should lead to a deceleration on industrial production growth during the following months.

Brazil: CPI (IPCA; % y/y)

Source: Bloomberg

3. Chile

- CPI inflation** rate rose 0.9% in October. This increase surpassed market expectations. Inflation reached 9.9% in the last twelve months, the largest since September 1994. However, we expect a deceleration for the remaining of the year, with an accumulated inflation of around 0.2% between November and December, closing the year below 9% y/y.
- Also the **monthly economic activity index** (IMACEC) increased 5.5% in September, above market consensus and consistent with our expectation (5%), . This was partially due to 3 working days than in september last year. sectors.

Chile: CPI and underlying inflation measures (Var. % y/y)

4. Colombia

- **Inflation** rose by 0.35% in October, above market expectations (-0.02%). Annual inflation accelerated 7,94%. This result was mainly driven by an unusual increase in non tradable goods which should be mostly reverted next month.
- Fedesarrollo's survey for September reported a further decline in consumer confidence (14,8 vs 18,2 in August)
- **Total credit** accelerated its growth pace from 17.9% (y/y) in August to 18.2% (yoy) in September. Commercial loans rose 20.3%, while consumer loans growth rate continued decelerating.

5. Mexico

- **CPI and core inflation** in October (0.7 and 0.3% monthly variation respectively) were influenced by hikes in energy prices (Government managed) and farm products. Yet, lower increases in processed food prices and rents could be linked to a cycle of lower GDP growth. Annual inflation figures (5.8% CPI and 5.3% core) were in line with Central Bank outlook.
- Confidence indicators showed last month's increased pessimism. Falls were particularly strong on the investment climate and durable goods acquisitions.

6. Peru

- **Monetary Policy Meeting.** Next Thursday will host the 13th monetary policy meeting, where we expect the Central Bank Board to keep the policy interest rate at 6,50%. Despite the fact that y/y inflation accelerated in October to 6,5% (6,2% in September), we expect inflationary pressures to moderate in the short term, thanks to lower commodities prices.
- **GDP.** We expect economic activity in September to have grown between 9,5% and 9,9%. This result would reflect the favorable performance of non primary sectors, related to local demand. If this result is confirmed, GDP would have grown 9,0% in the third quarter of 2008 (9,9% y/y in 2008 as of 3Q08).

7. Venezuela

- **The benchmark price index**, CPI-Caracas, decelerated on m/m basis by 39 bp, reaching 2,1% in October. On y/y basis headline inflation showed the first slowdown in 12 months (36,6%). Although this lower growth of prices is in accordance with the authorities' announcement, it resulted quite low in order to fulfill the official inflation target of 27% in 2008. Core inflation grew at the smallest rate of the last 14 months (1,2%), what represents a signal of disinflation, shortly. **On a national basis**, price growth reported 2,4% in October and, 24,7% since last December.

Foreign exchange market

Mexican peso and Brazilian real have reverted much of their recovery of last week, giving way to swift interventions by their respective central banks. The Chilean peso appreciated, due to large volume of foreign currency supplied by Pension Funds and local businesses.

Emerging Markets Spreads

Greater risk aversion and pessimism in global financial markets eliminated in some instances the country risk improvement seen early in the week. Argentina registered a significant correction, although it maintains the highest level of risk in the region.

Commodity Markets

Oil prices continued to fall sharply. Base metals and agricultural goods, however, displayed moderation on their downward trends this week.
