

## Market Comment | OPEC agreement boosts inflation expectations

Global Financial Markets Unit 01 Dec 2016

- In the wake of the announcement of the OPEC deal, US and European financial markets saw high volatility in equities, and sovereign yields extended their upward trend (also in EM, especially in USDdenominated debt), while Asian financial markets showed slightly lower risk aversion. The major market sensitive events were the following:
- Oil prices extended yesterday's sharp increase after OPEC members agreed to cut oil production
  (see official statement and see BBVA report). Oil companies' shares outperformed, while inflation
  expectations increased, boosting sovereign bond yields. Nonetheless, EM currencies depreciated for a
  number of reasons: currencies of oil importing countries suffered (such as the TRY) and the MXN
  depreciated on reports that the Mexican Central Bank Governor will stand down in mid-2017 (see details
  ).
- **US Treasury yields** rose significantly for a second day in a row, led by higher oil prices coupled with higher-than-expected ISM US manufacturing data in November (see details).
- Asian financial markets bucked the trend, showing gains in stock prices and lower risk aversion (underpinned also by the surge in oil prices) as China's manufacturing sector surprisingly expanded, reaching its historical high since July 2012 (see BBVA report).
- The pound sterling climbed as the UK is considering making contributions to the EU budget to gain access to EU markets, reducing the perceived risk of a "hard" Brexit (see details).
