Market Comment | Economic data influenced developed countries' currencies

Global Financial Markets Unit 30 Mar 2017

BBVA Research

- Economic releases focused the attention of financial markets in the US and EZ, as they could influence the pace of normalization in developed countries' central banks, given the ongoing uncertainty regarding this issue. In the US, the USD appreciated, halting the recent trend, after the upward revision of Q416 US GDP (see), also helped by a barrage of hawkish comments from the Fed (see), with no impact on bond yields.
- In the euro zone, inflation disappointed in March, reducing pressure on the ECB to accelerate a potential tightening path. Preliminary figures show German inflation falling sharply in March (to 1.5% YoY), decreasing by 0.7 pp as energy and unprocessed food prices came in weaker than expected (see). Spanish inflation also was lower than expected. In the wake of the releases, the EUR depreciated and European yield curves reversed their previous trend, ending up flat.
- Yesterday's triggering of Article 50 by the UK government did not have a strong impact on financial markets, which were relatively steady, as was the GBP.
- Traders were also focused on China's financial markets as liquidity concerns increased (see). Shanghai, Shenzhen and Hong Kong fell, with the property sector under pressure, following last's week liquidity pressures in the interbank market and coinciding with a warning from Moody's pointing to the risk of a property downturn in China's economy.
- Oil rallied for a third day in a row, reaching 3-week highs, on the back of rising prospects of an extension in the OPEC output deal (see).
