

## Market Comment | The positive mood in markets continued

Global Financial Markets Unit 30 Nov 2017

- Financial markets performed less well today, with higher equity volatility amid a notable drop in the technological sector and some ongoing falls in China's equities. On the other hand European shares performed well.
- Oil prices reacted positively to the increasing likelihood of a renewed agreement between OPEC and non- OPEC oil producers. Russia, one of the most important players in the oil industry, showed some doubts about subscribing to the agreement, but seems finally to have agreed to extend the cuts in oil production into 2018 (see).
- European sovereign bond yields decline slightly (especially in the European periphery) as EZ inflation was released (<u>see</u>), showing a lower than expected figure, backing a slow ECB tapering.
- The USD declined slightly ahead of the Senate vote on the tax bill, expected later today. Some
  amendments may be made to the bill to ensure sufficient support. A final vote may be held at the end of
  the week (see). Apart from this, Trump nominated Marvin Goodfriend to the Fed board, an economics
  professor who was critical of some aspects of the Fed's quantitative easing (see).
- EM currencies showed a mixed performance, despite the rise in oil prices, as the USD was trading stronger, due to the prospects of an earlier than expected US tax bill approval, inducing caution among investors in EM markets.
