

Market Comment | China GDP 4Q figure surprised to the upside

Global Financial Markets Unit 18 Jan 2018

- Increasing volatility in financial markets (VIX) since its recent lowest levels did not lead to significant
 movements in financial markets, while China released better-than-expected growth figures for 4Q
 (see BBVA Research report). Equity markets remained almost unchanged amid mixed releases of
 corporate earnings, with a slight underperformance of European equity indices, which could still be
 suffering from the EUR's recent high levels.
- US yields inched up today to reach the 2.6% level for the first time since the last US elections, amid speculation that the US Congress will avert a government shutdown (see). Sovereign bond yields in the euro area remained little changed across the board, although peripheral risk premiums continued their downward trend.
- The EUR appreciated today despite the ECB's Nowotny's warnings about EUR strength, arguing that
 the recent EUR appreciation is not explained by fundamentals (see). On the other hand, the USD
 remained flat as shown in the DXY Index.
- Oil prices declined as OPEC released higher forecasts for US oil production (see). Nonetheless, EM currencies appreciated across the board, boosted by other commodities' good performance after China's GDP figures showed higher-than-expected growth. Even the MXN rose, despite Trump's comments on the NAFTA renegotiation (see).
