

## Market Comment | Confidence indicators weigh on EUR, at its lowest of this year

Global Financial Markets Unit 23 May 2018

- Negative mood in global financial markets. The release of disappointing macroeconomic data and the
  return of geopolitical concerns shifted yesterday's positive mood. Demand for safe-haven assets was
  high, while risk assets dropped in a context of increasing volatility.
- Against this backdrop, the US 10Y Treasury bond yield went down, approaching the 3% threshold, while equity indices fell after comments on trade talks with China, which increased uncertainty about global trade (see).
- European assets were penalized across the broad. The release of worse than expected confidence data in the EZ and ongoing political tension in Italy weighed (see). All these factors dragged down the 10Y Bund yields to hover around 0.50%, contributing to widen peripheral risk premia despite the relative stability of peripheral bonds. The main exception was Italy, as its premium continued to increase today.
- In line with global equity indices, European **indices showed a very poor performance**, registering sharp drops which in some indices were close to 2%. There was some underperformance in the banking and energy sectors.
- In this context the **EUR stood at its lowest level in the year against the USD**, while the GBP suffered from weak inflation data in May in the UK (see)
- EM currencies continued their depreciation path after a short break as the global trade outlook worsened. The stabilization in oil prices below \$80 amid rumours of OPEC increasing global supply and the release of US inventories also weighed. The TRY again underperformed its peers and hit its historical lowest level against the USD.
